## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The most outstanding features of the weather over Arkansas during the month of March 1952 were widespread wind and hail storms over the northern half of the State on the 3rd and a series of extremely destructive tornadoes which traversed the State from southwest to northeast during the afternoon and evening of the 21st.

The monthly mean temperature for the State was 50.1°, which is 2.3° below the normal. The highest monthly mean temperature was 54.6° at Warren and the lowest was 45.1° at Bentonville. The highest temperature recorded was 89° at DeQueen on the 31st. The lowest temperature recorded was 14° at Green Mountain on the 6th. Temperatures of freezing or lower were recorded on an average of 10 days during the month. Below-freezing temperatures occurred over the entire State on the mornings of the 5th and 6th, were general on the mornings of the 16th, 23rd and 24th, and over the northern half on the 26th and 28th. Frost was reported on the mornings of the 16th, 23rd, 24th and 28th.

The average monthly precipitation for the State was 5.59 inches, which is 0.83 inch above the normal. The greatest monthly total was 10.08 inches at Mount Ida and the least was 2.37 inches at Louann. The greatest daily precipitation recorded was 4.11 inches at Marshall on the 10th. The greatest monthly snowfall was 0.5 inch at Rogers.

The principal agricultural activity during the month was the preparation of seed beds and planting. This work progressed as rapidly as weather conditions permitted. On the average, progress was normal in most sections. The month's activity as concerned cotton was limited to the preparation of seed beds and the treatment of seed. Fruit trees were blooming as the month opened. Despite periods of freezing weather and general frosts, damage to fruit was slight. Winter grains and pastures made good to excellent progress. There was some aphid damage to oats. Planting of spring oats began near the middle of the month. Corn planting began on a limited scale near the middle of the month, but did not become general until after the close. Potato planting began early in the month, and continued as weather permitted. Planting of early garden and truck crops made good progress in all sections. The harvest of spinach and mustard was in full swing as the month opened and continued to near mid-month. In most respects, the month was favorable for agriculture.

### STORMS

During the early morning of March 3rd, widespread hail and wind storms caused extensive damage in Logan, Pope, Washington, Cleburne, Jackson, Craighead and Mississippi Counties. Principal damage was to roofs, windows and automobiles. The total monetary loss was estimated $500,200, of which more than $50,000 was to crops.

On the same morning, a small tornado destroyed the roof of a lumber yard at Booneville, causing $998 damage. This storm did no other damage.

A home 8 miles east of Fayetteville was destroyed by fire after having been struck by lightning at 5:30 a.m. of the 3rd. Monetary loss was estimated at $60,000.

On the afternoon of the 21st, a series of tornadoes traversed the State from southwest to northeast. There were at least three separate storm tracks (see map). In the Bald Knob-Judsonia area there may have been two or possibly more storms with overlapping tracks. There is, however, not sufficient evidence to justify a definite conclusion that more than one storm went through the area.

The first tornado reported was at Dierks in Howard County at 3:00 p.m. This storm apparently continued in a northeasterly direction successively striking Paron in Saline County, Mayflower in Faulkner County, two miles south-southwest of Searcy in White County, then stayed on the ground through the towns of Kensett, Judsonia and Bald Knob. Five miles to the northeast of Bald Knob the storm again went aloft and did not again strike ground until it reached extreme southeastern Jackson County, and again went aloft. It was last reported as being aloft in the vicinity of Lake City in Craighead County.

A second tornado was first sighted aloft to the north of the City of North Little Rock at 5:00 p.m. This storm first touched ground near Wattinsaw in Lonoke County, Hickory Plains in Prairie County, Georgetown and McCrory in Woodruff County, Hickory Ridge in Cross County, 3 miles north of Harrisburg and the town of Trumann in Poinsett County and the Milligan Ridge Community and Blytheville. Shortly east-northeast of Blytheville the storm again went aloft and was reported to have struck ground near Cottonwood Point, Tennessee.

A third storm apparently originated to the southwest of England in either north-central Jefferson or southwestern Lonoke County. After striking England, the storm struck to the southeast of Carlisle and stayed mostly on the ground to Hazen in Prairie County, then skipped to near Cotton Plant and Hilleman in Woodruff County. The storm next struck in Poinsett County to the southwest of Marked Tree and stayed on the ground to the extreme eastern edge of the County. The storm then went aloft and apparently dissipated near the Mississippi River to the southeast of Blytheville.

This was the greatest tornado disaster ever to strike the State of Arkansas. During the afternoon and evening 111 persons were killed, and 772 injured, of whom 385 required hospitalization. 2,263 persons were directly affected by the storm. 867 homes were destroyed and 1,540 damaged. Total property damage is estimated at $6,745,000. The Searcy-Kensett-Judsonia-Bald Knob area of White County was the hardest hit. The town of Judsonia was almost completely leveled.

### FLOODS

General heavy rain over Arkansas on March 9th and 10th with storm totals averaging near 2.00 inches caused sharp rises on the White, Black and Ouachita Rivers and tributaries. The White River at Batesville was above flood stage on the 12th, cresting at 25.0 feet on that day; at Augusta from the 14th to the 19th and from the 24th to the close of the month, cresting 32.3 feet on the 16th and on the 31st; at Georgetown from the 15th through the close of the month cresting at 22.1 feet on the 24th and 22.2 feet on April 1st; at Des Arc from the 18th through the close of the month, cresting at 24.9 feet on the 27th; at Clarendon from the 15th through the close of the month, cresting at 28.5 feet on April 1st; at St. Charles from the 18th through the close of the month, cresting at 27.5 feet on April 14th. The Black River was above flood stage at Poplar Bluff, Mo., on the 12th, cresting at 16.1 feet on that date and again on the 22nd, cresting at 15.0 feet on that date; and at Black Rock from the 11th through the close of the month, cresting at 23.3 feet on the 12th. The Ouachita was above flood stage at Arkadelphia on the 12th and 13th, cresting at 17.8 feet on the 13th; and at Camden from the 14th to the 17th, cresting at 28.3 feet on the 12th. The Little Red River was above flood stage at Judsonia on the 12th and 13th, cresting at 33.5 feet on the 13th. Forecasts and warnings were issued promptly and were adequate. Since this flooding came early in the season, damage was slight.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

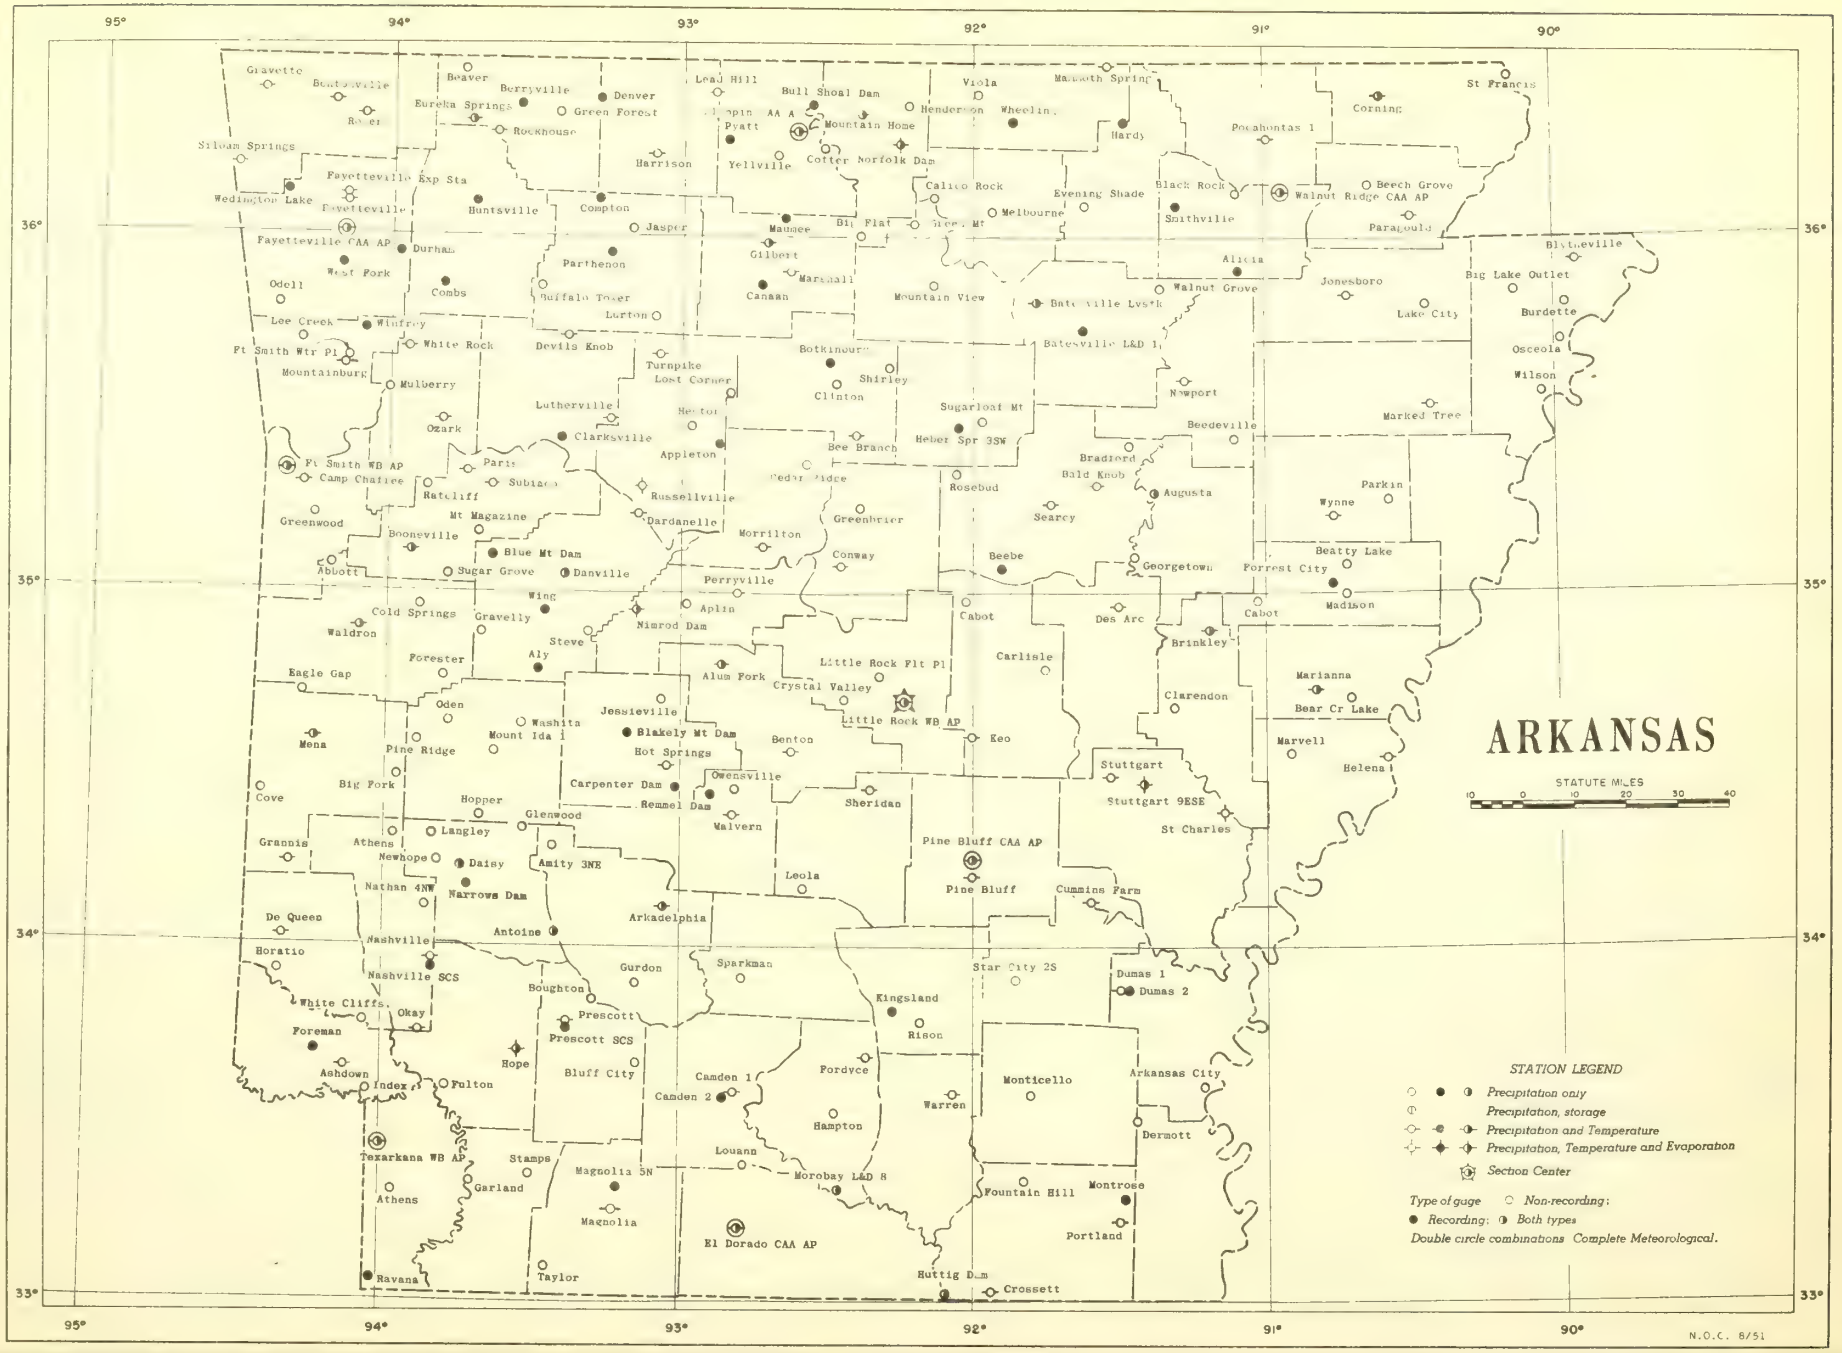
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

APRIL 1952
Volume LVII No. 4

KANSAS CITY: 1952

## ARKANSAS - APRIL 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The first three weeks of April 1952 over Arkansas were cool and wet with frequent showers. Conditions during this period were generally unfavorable for the preparation of seed beds, spring planting or the germination of newly planted seeds. Warm sunny weather during the last week brought an upswing in all forms of agricultural activity.

The monthly mean temperature for the State was 58.1°, which is 3.5° below the normal and exactly the same as the mean temperature one year ago. Monthly mean temperatures at individual stations ranged from 54.1° at the Fayetteville Airport to 61.8° at Okay. The highest temperature recorded was 93° at Blytheville on the 29th and at Arkadelphia and Bee Branch on the 30th. The lowest temperature was 23° at Mount Magazine on the 5th. There was an average of two days on which temperatures fell to 32° or lower and one day on which they rose to 90° or higher. Light frost was reported over much of the northern portion of the State on the morning of the 15th with some stations in the extreme northern counties reporting heavy frost.

The average precipitation over the State was 5.88 inches, which is 0.94 inch above the normal. Monthly totals ranged from 2.17 inches at Wilson to 14.00 inches at Newhope. Monthly totals exceeding 10 inches were reported by 22 stations. The greatest daily amount reported was 4.20 inches at Danville on the 22nd. There were frequent showers until the 24th, with no precipitation from that date through the close of the month. Frequent showers during the first three weeks seriously delayed field work in all sections of the State. Because of the urgent need to complete the seeding of spring planted crops, tractors, in many areas, were operated day and night whenever fields were dry enough to be worked. Even so, field work was generally limited to a couple of days, or less, at a time.

At the close of the first week of April the preparation of seed beds for cotton ranged from 25 to 75 per cent complete. At this time, only a few scattered fields had been planted. By the close of the month, cotton planting was generally well along, with the greatest progress having been made during the last week. Because of excessive soil moisture and low temperatures, a considerable amount of early planted cotton had to be replanted.

The planting of the rice crop was also delayed by frequent showers. By mid-April, only a few fields had been seeded. By the close of the month the planting of early varieties of rice had made fair progress in the southeastern counties but was generally behind schedule in the northern portion of the rice area.

Like cotton and rice, the planting of the corn crop was seriously delayed by adverse weather during the first three weeks of the month. A little corn had been planted in most areas by mid-month. By the close of the third week, considerable corn had been planted in some localities. A few areas reported corn up to a stand and some large enough for its first cultivation. By the close of the month, more than half of the crop had been planted in several localities. It was, however, evident that much early planted corn would have to be replanted, especially in bottom lands.

The planting of soybeans was also delayed by adverse conditions. By the close of the month from 50 to 75 per cent of the crop had been planted in Mississippi and Poinsett Counties and getting well started over the remainder of the State.

In contrast to cotton, rice, corn and soybeans, small grains made rapid growth during the month. By the close, full seeded oats were heading in northern counties. Despite cool temperatures prevailing during the first three weeks, pastures made fair to good progress, and generally furnished excellent grazing. As a result, cattle remained in good flesh.

Miscellaneous truck crops generally made satisfactory progress. The radish crop was good.

Strawberries made good growth during the month. By the close of the month a few crates had been picked, and crop prospects were generally good. Despite the killing of many peach buds by late March freezes, there were prospects of a good crop in most areas.

### STORMS

At 6:45 p.m. of April 22nd, a small tornado struck 1 1/2 miles north of Magnolia. Damage was limited to a few shingles torn from the roofs of two buildings and the destruction of a utility pole. No one was killed or injured, and property damage was estimated at $55.

At 7:15 p.m. of the same evening, another small tornado struck ground near the Pleasant Valley Cemetery, 8 miles north of Batesville, damaging a house and barn and destroying or damaging several outbuildings. A large tree was blown onto a flat bed truck. The truck was an almost total loss. Monetary loss was estimated at $1,050.

### FLOODS

There were heavy showers on April 11th and 12th which gave storm totals ranging between two and three inches over nearly the entire State. There were heavy thundershowers on the 21st, which gave precipitation totals locally ranging up to as much as six inches over the Arkansas River Basin between Van Buren and Morrilton and over the Upper Ouachita River Basin, and between 1 and 2 inches over the White and Lower Ouachita River Basins.

The White River was above flood stage at Augusta from the previous month through the 4th and from the 15th through the close of the month, cresting at 32.8 feet on the 17th; at Georgetown from the previous month through the 10th, cresting at 22.2 feet on the 1st and from the 14th through the close of the month, cresting at 23.2 feet on the 26th; at Des Arc from the previous month through the 9th and from the 16th through the close of the month, cresting at 25.9 feet on the 27th; at Clarendon through the entire month, cresting at 28.7 feet on the 29th; and at Saint Charles during the entire month, cresting at 27.1 feet on the 5th.

The Black River was above flood stage at Black Rock during the entire month, cresting at 20.1 feet on the 14th.

The Little Red River was above flood stage at Judsonia on the 14th, 15th, 24th and 25th, cresting at 32.7 feet on the 14th and 32.1 feet on the 24th.

The Ouachita River was above flood stage at Arkadelphia on the 2nd, 3rd, 13th through the 16th and 23rd through the 26th, cresting at 21.1 feet on the 2nd, 23.8 feet on the 13th, and 22.8 feet on the 24th; at Camden from the 5th through the 9th and from the 14th through the close of the month, cresting at 28.0 feet on the 6th, 35.3 feet on the 18th and 34.0 feet on the 29th.

Since these streams had been at high or nearly as high stages during the previous month, damage from this flooding was negligible except for continued loss of the use of the land adjacent to the streams for agricultural purposes.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

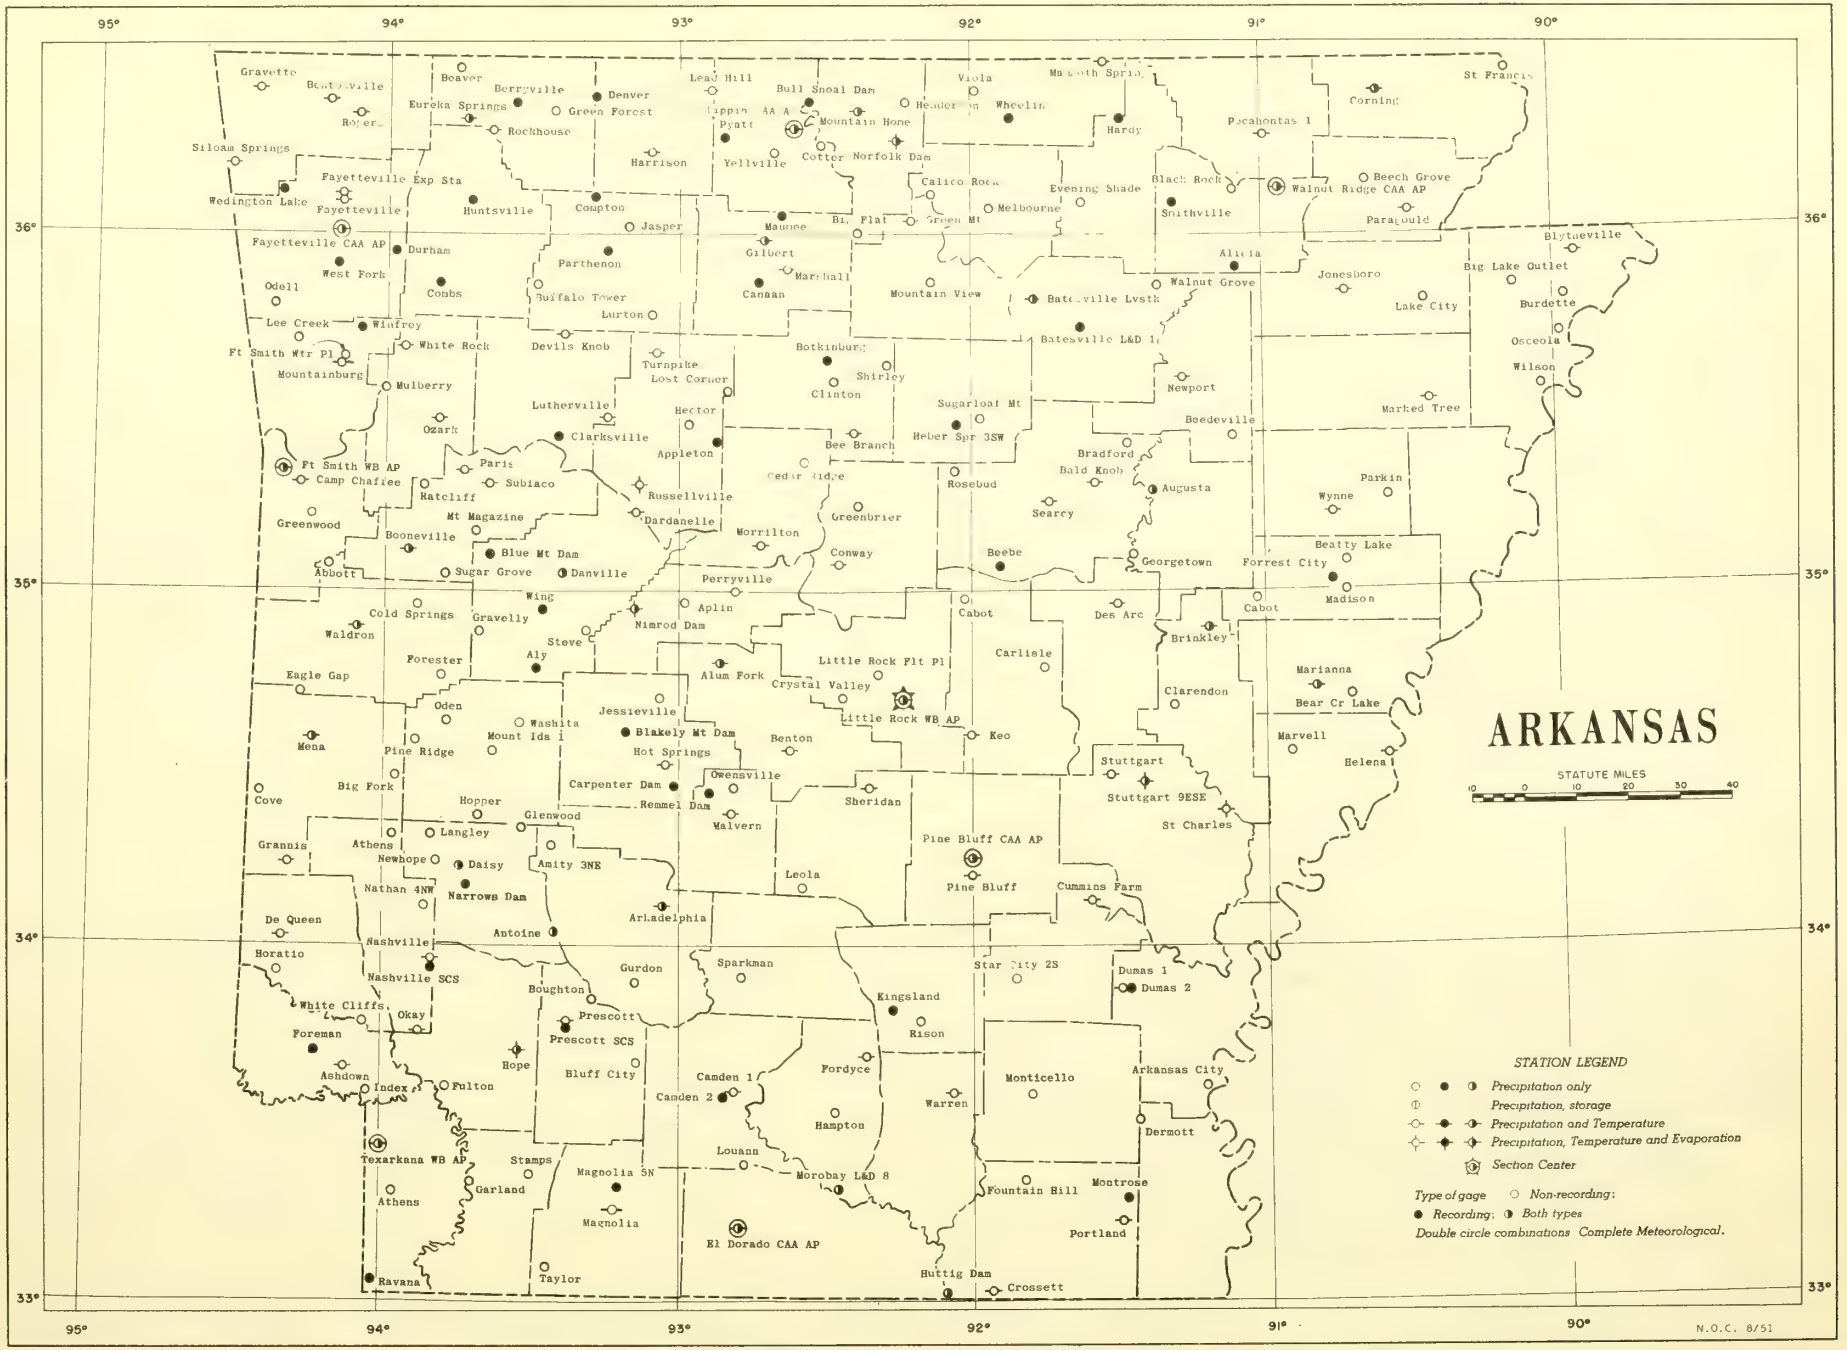
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full morth. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 6-13-52 -- 1110

Hourly precipitation data from recorder substations are not available.

MAY 1952
Volume LVII No. 5

KANSAS CITY: 1952

## ARKANSAS - MAY 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during May 1952 was, in general, favorable for crop growth.

The monthly mean temperature for the State was 68.9°, which is 0.2° below the normal. Monthly mean temperatures at individual stations ranged from 64.2° at the Fayetteville CAA station to 72.8° at Blytheville and Warren. The highest temperature recorded was 100° at Brinkley on the 6th, and the lowest, 31° at Gravette on the 12th. There was an average of 5 days on which temperatures rose to 90° or higher. Only two stations, Gravette and Lead Hill, reported temperatures of 32° or lower during the month.

The average monthly precipitation over the State was 4.14 inches, which is 0.97 inch below the normal. The greatest monthly total was 6.90 inches at Devils Knob and the least 1.89 inches at Crossett. The greatest daily precipitation amount reported was 3.90 inches at Devils Knob on the 23rd. Rainfall was quite well distributed throughout the month, except for a rather dry period during the opening week.

The month's weather, while not ideal for cotton, was not too unfavorable in most sections. As the month opened, about 70% of the crop had been planted. By mid-month, planting had been almost completed in all sections. While some cotton was up and ready to be chopped by the end of the first week, most fields were in need of moisture and warm weather to germinate the seed. Cotton generally got off to a rather poor start due to dry and unseasonably cool weather, seedling diseases, delayed germination, cut worms and difficulties with pre-emergence chemicals.

The seeding of rice was delayed in many sections by dry soil during the first week. In some areas, farmers finally flooded the fields and seeded the rice in the water. Although seeding progressed slowly during the month, only a small acreage remained to be sowed at the close. A number of early fields were flooded during the latter half of the month.

A considerable acreage of soybeans had been planted during the previous April, with planting continuing throughout the month of May. Planting was, however, nearing completion by the close of May. Early planted fields came up during the last half of the month and generally made a favorable growth.

By mid-May, most early corn had been planted and a considerable amount up and cultivated. By the close of the month, many fields had been cultivated twice and some laid by, especially in the southern counties.

Fruits, berries and truck crops generally made satisfactory progress during the month. At the close, a fair to good crop of very good quality peaches was in prospect, and apples appeared promising.

### STORMS

A wind and thunderstorm struck West Memphis at 4:30 p.m. of the 7th. One person was injured and property damage was estimated at $25,000.

During the evening of the 9th, a hailstorm struck DeQueen, causing damage within a radius of four miles of the town. A hail and wind storm struck the Mineral Springs area of Washington County, causing extensive damage to property. During the same evening, a windstorm caused extensive damage to store windows and power distribution lines in North Little Rock.

During the early morning of the 10th, a series of windstorms, with local hail, swept across the extreme southern portion of the State from the Texas border to the Mississippi River. Some hail was reported in Lafayette, Columbia, Calhoun and Bradley Counties, but damage from this source was slight except in Columbia County. Property damage was, however, extensive; most of it was attributed to wind. One person was injured in Union County.

During the late morning of the 23rd, a series of windstorms struck Sevier, Little River, Howard, Clark and Columbia Counties in the southwest corner of the State. One person was injured. Only moderate property damage and slight crop damage was reported.

Monetary loss attributed to storms during the month was estimated at $563,825 of which $119,800 was reported as having resulted exclusively from damage to crops.

### FLOODS

The Black River was above flood stage at Black Rock on the first. The White River was above flood stage from the beginning of the month until the 2nd at Augusta, the 5th at Georgetown and Des Arc, the 14th at Clarendon and the 16th at Saint Charles. The Ouachita River was above flood stage from the beginning of the month until the 3rd at Camden. Since all flooding was due to continued high water from the previous April, damage was negligible except for the loss of the use of agricultural land adjacent to the streams.- JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

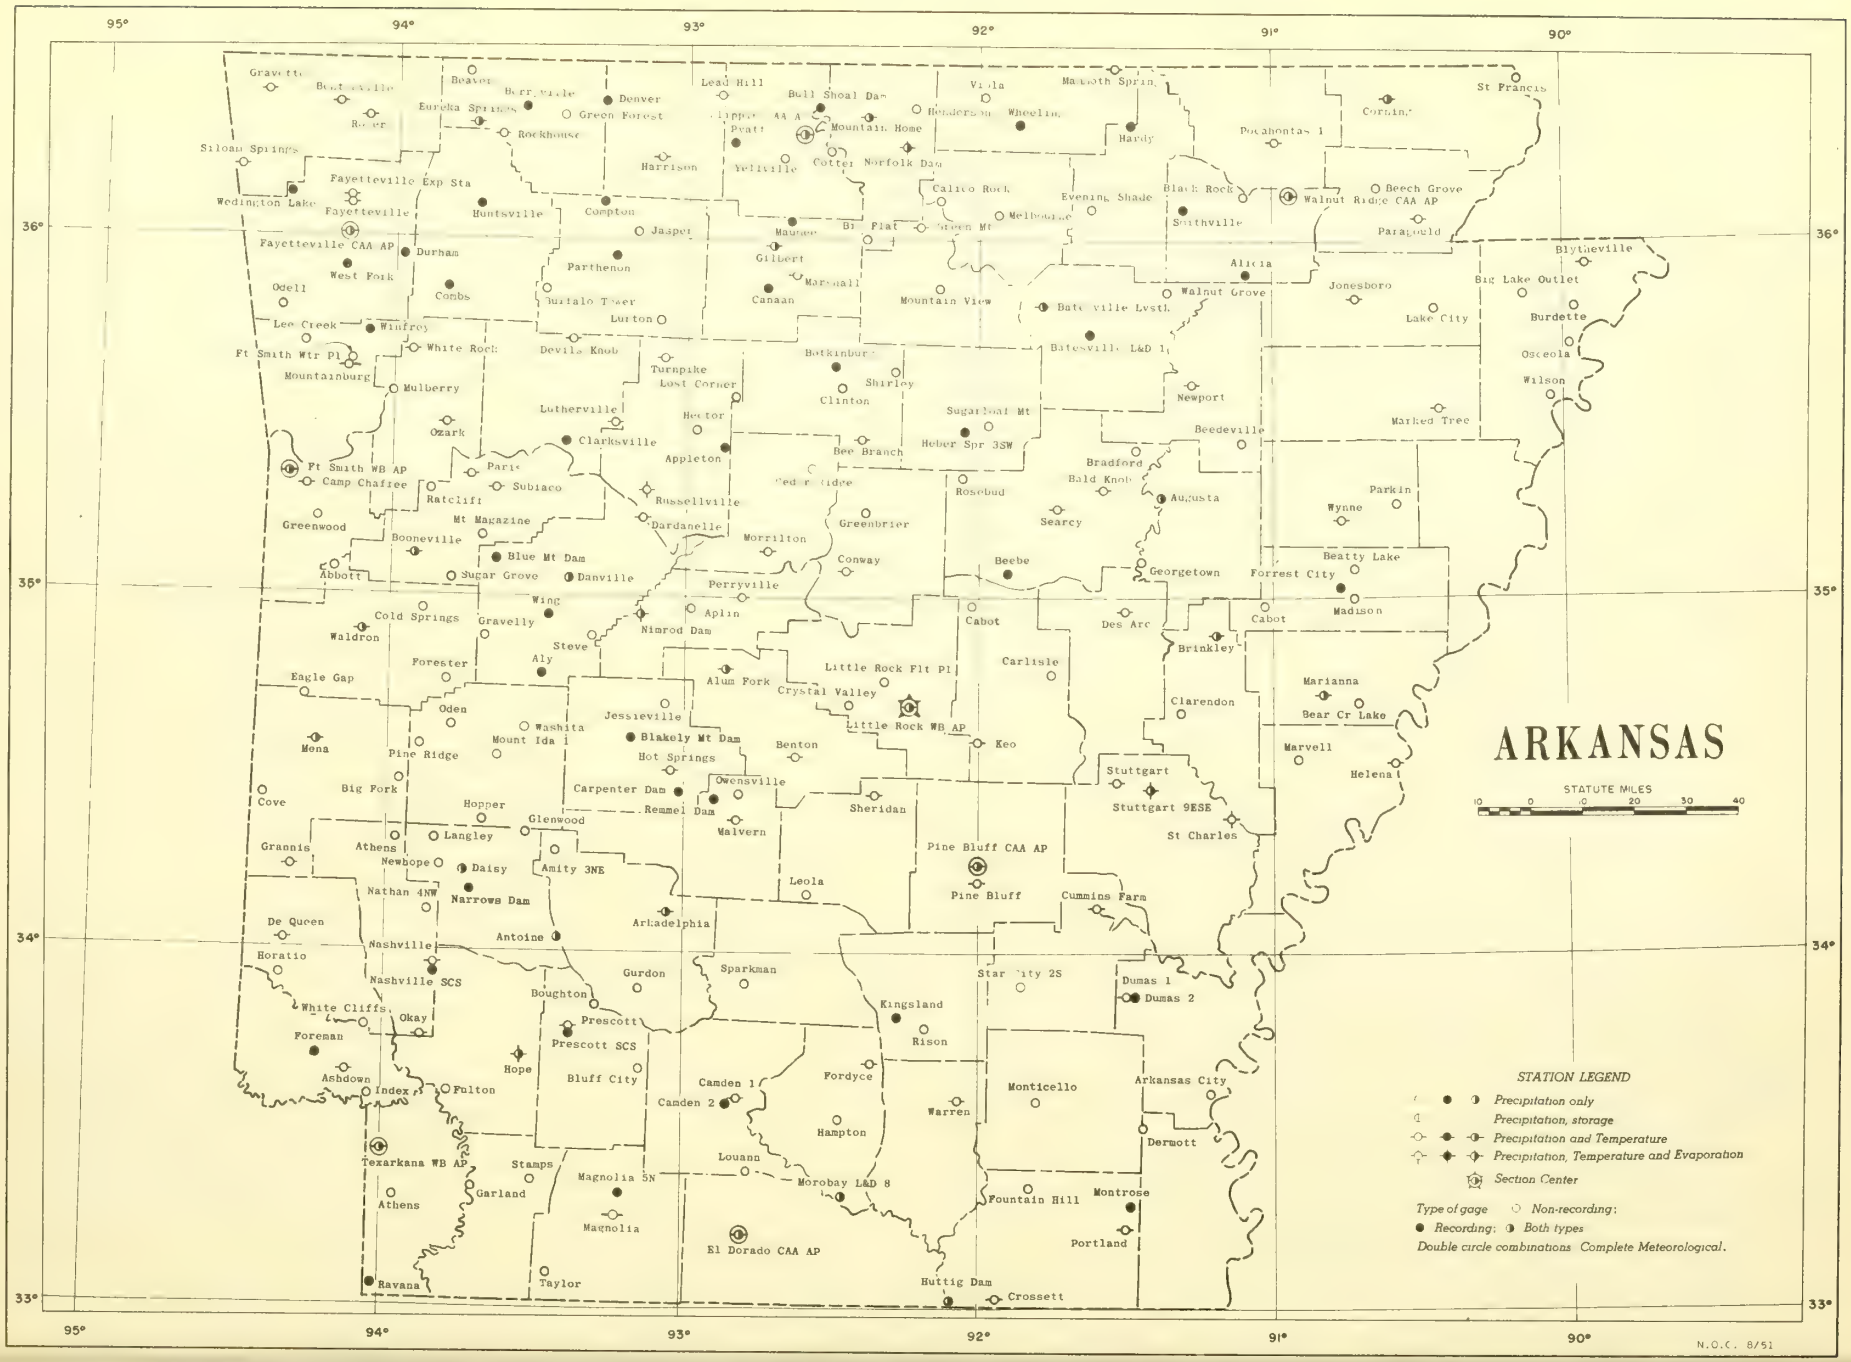
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

JUNE 1952
Volume LVII No. 6

KANSAS CITY: 1952

## ARKANSAS - JUNE 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the driest and second hottest June over Arkansas since statewide records were begun in 1891.

The average monthly precipitation for the State was 0.49 inch which is only slightly more than half of the 0.87 inch for the previous driest June which occurred in 1930. The greatest monthly total was 3.19 inches at Athens. Nineteen stations reported no rain at all during the month and 14 only sprinkles too light to measure. While many more stations are in operation at the present time, it is interesting to note that in June 1930 only one station reported no rain during the month and two stations sprinkles too light to measure. The greatest daily rainfall was 1.90 inches at Rogers on the 1st. There was a statewide average of only one day with 0.01 inch or more of precipitation.

The monthly mean temperature for the State was 82.1°, which is 5.0° above the normal. This was exceeded only by 82.3° which was the State's mean temperature in June both of 1914 and 1925. Monthly mean temperatures at individual stations ranged from 77.9° at Turnpike to 87.0° at Blytheville. The highest temperature recorded was 109° at Blytheville on the 28th. The lowest was 49° at the Batesville Livestock Experiment Station on the 2nd. Temperatures rose to 90°, or higher, on an average of 25 days during the month. Blytheville and El Dorado reported temperatures of 90°, or higher, every day during the month.

At the beginning of the month, soil moisture was adequate in all sections. In fact, moisture was considered to be excessive in many localities, especially in a number of west-central and southern counties. Warm dry weather was urgently needed throughout the cotton areas.

At the beginning of the month, some cotton was dying due to cool weather and seedling diseases, and the growth of much of the crop was retarded. Cotton showed a marked improvement as a result of warm, dry weather during the second week. By the last week, however, growth had again been slowed. This was the result of dry weather and was most pronounced on the uplands and buckshot land. Older cotton withstood the drought very well, but the growth of late plantings was slowed materially. One favorable aspect of the hot dry weather was that insects were held in check. To the close of the month, insect damage in most localities had been very light. As a result, only a limited amount of poisoning was necessary.

A large portion of the rice crop was up at the beginning of the month, and much of it had been irrigated. Some seeding was, however, in progress in most areas. Growth had been retarded somewhat by cool weather. On the whole, the crop made good progress, except in a few instances where irrigation facilities were inadequate to completely flood fields without the aid of rainfall. While much water was used, no serious shortages had developed by the close of the month.

Corn had made a slow start during the previous month and had just begun to grow well as June opened. The crop made excellent progress during the first two weeks, but hot dry weather proved to be unfavorable the last two weeks. Much early corn was in the tasseling and silking stage during the last two weeks. Some of this was damaged beyond hope of recovery. The yield potential of late corn was considerably reduced.

Soybeans made excellent progress during the first two weeks of June and fair progress during the remainder of the month. Some late soybeans, however, were damaged by hot dry weather during the closing week. While soybeans generally suffered less than any other crop, a good rain during the last week would have been very helpful.

The oat harvest was mostly completed by the third week. Many counties reported above average yields. The harvest of small grain crops was nearing completion by the close of the month, with good yields the rule. The harvest of a large crop of Singletary peas was completed during the month. A good yield of crimson clover seed was obtained.

Those hay crops that had reached maturity prior to the advent of dry weather gave excellent yields under very favorable curing conditions. Hay crops, however, were generally cut short. Pastures deteriorated rapidly and by the close of the month were furnishing a smaller amount of feed than usual. This resulted in a loss of flesh in beef heads and a reduction in milk production. Supplemental feeding was necessary in some areas.

The hot dry weather reduced the size of early peaches and seriously reduced the yields of vegetable crops and kitchen gardens.

### STORMS

At 3:35 p.m. of June 4th, a tornado funnel formed in a cotton field near the campus of Southern Baptist College five miles north of Walnut Ridge and moved from west to east. The storm destroyed an empty farm house and damaged some outbuildings. While no estimate is available, monetary loss is considered to be slight.

At 2:30 p.m. of the 18th, a tornado struck near Scott. Movement was from west-southwest to east-northeast. Damage was confined to a narrow swath through some small timber and the destruction of two small barns. No estimate of monetary loss is available.

At 4:15 p.m. of the 19th, a wind and hail storm moved from west to east across the southern and eastern parts of West Memphis, Arkansas. Damage was estimated at $25,000 and was caused principally by high wind.

### FLOODS

There were no floods in Arkansas during June 1952.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

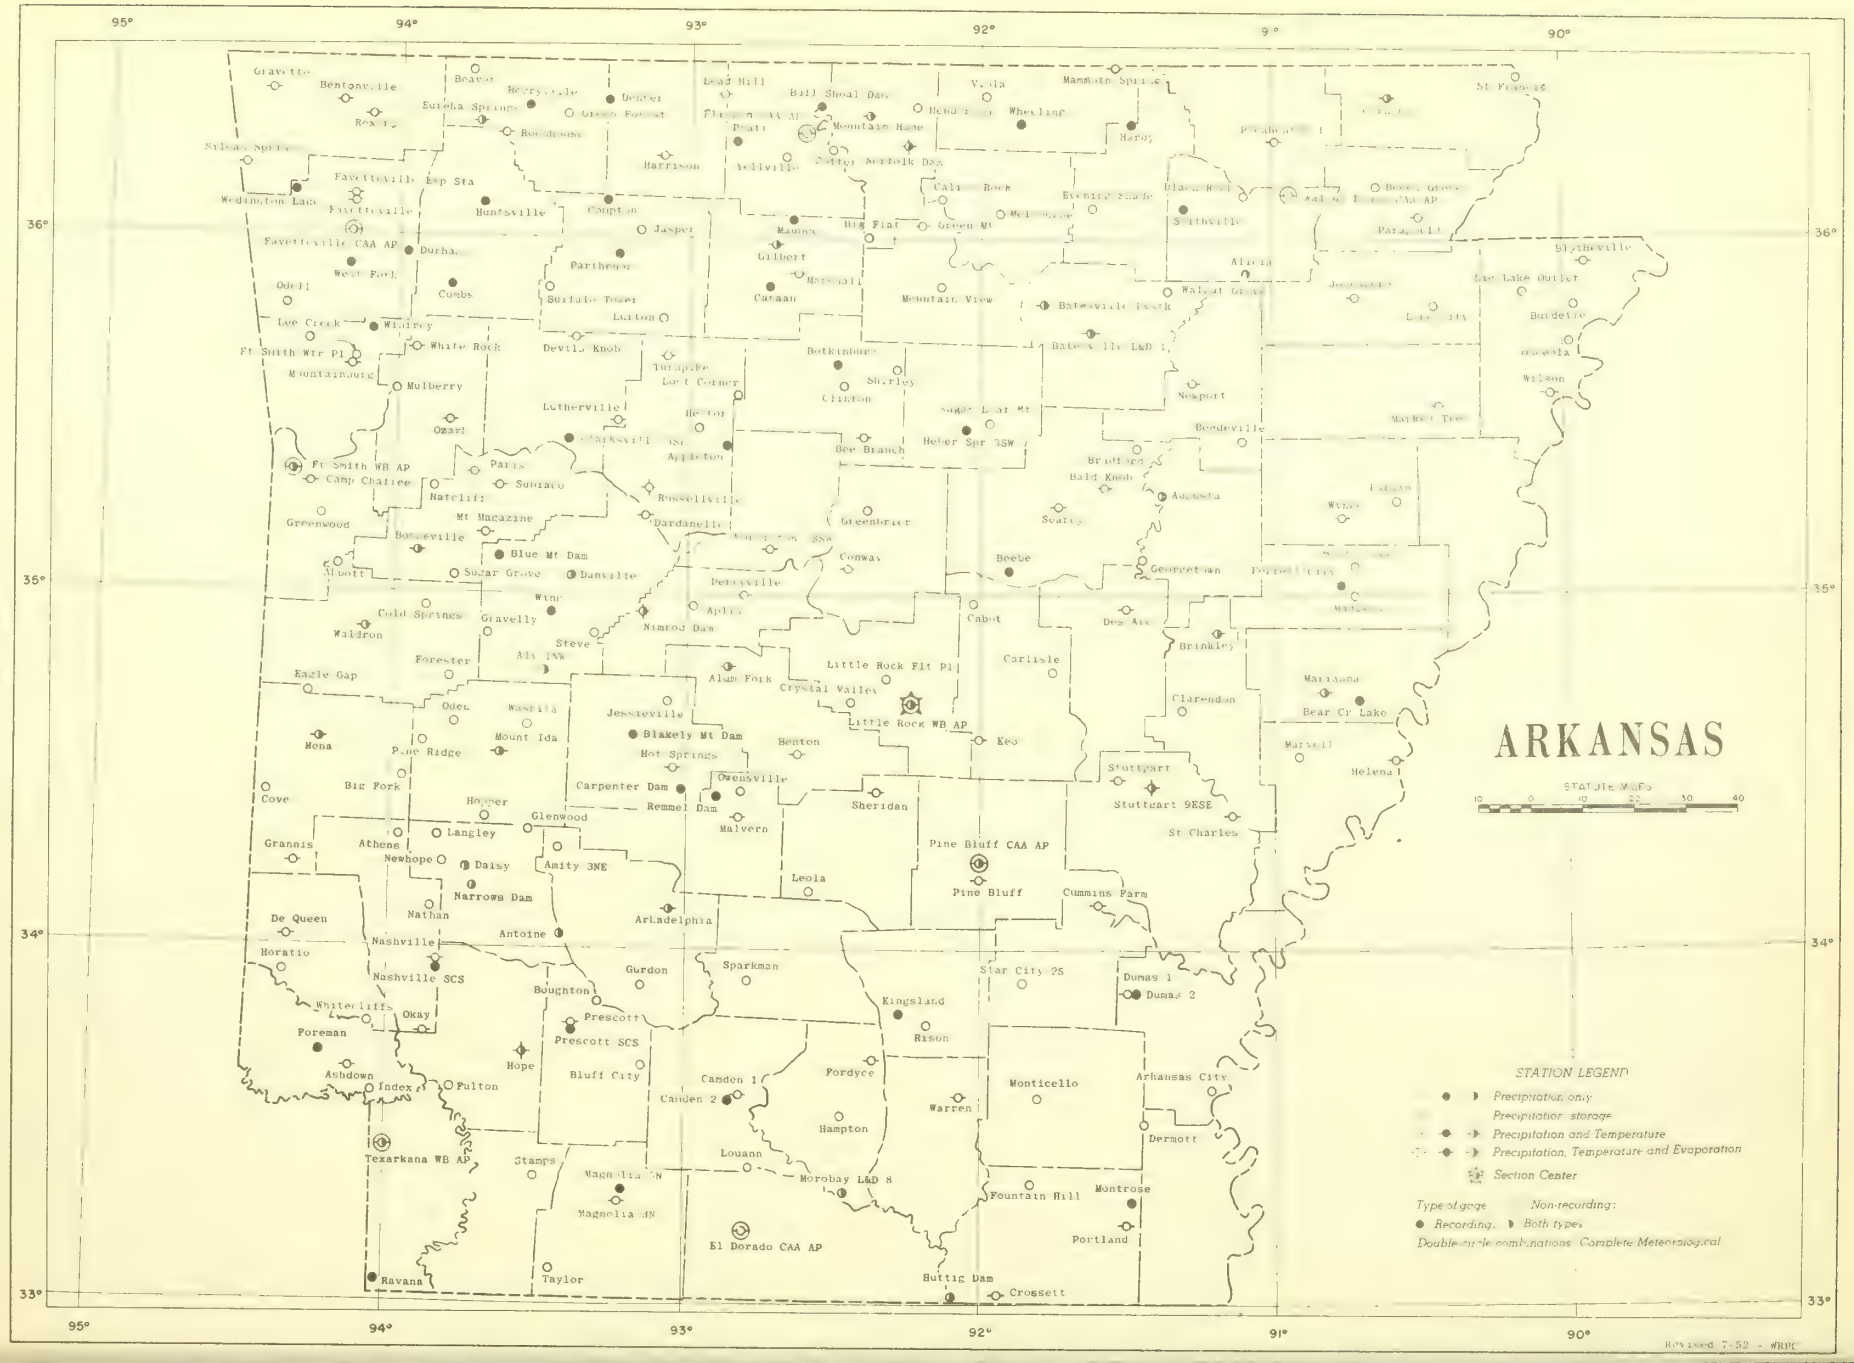
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

JULY 1952
Volume LVII No. 7

KANSAS CITY: 1952

## ARKANSAS - JULY 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Drought conditions, beginning early in the previous month, continued through July 1952. Scattered showers falling at various times during the month, some giving locally heavy precipitation amounts, brought at least temporary relief to many areas. They did not, however, materially affect the over-all situation and were of lasting benefit in only a few favored localities.

The monthly mean temperature for the State was 82.4°, which is 1.9° above the normal. The highest monthly mean was 85.8° at the Cooperative Station in the City of Pine Bluff, and the lowest 77.1° at Turnpike. The highest temperature recorded was 109° at Blytheville on the 27th and 28th, at Brinkley on the 28th, at Conway on the 27th, 28th and 29th, and at Searcy on the 27th and 28th. The lowest temperature recorded was 50° at Bentonville, Fayetteville CAA, Fayetteville Experiment Station, Gilbert, and Gravette on the 9th. There was a statewide average of 27 days on which the temperature rose to 90° or higher.

The average monthly precipitation for the State was 2.51 inches, which is 1.23 inches below the normal, but over five times that of June. Monthly totals at individual stations ranged from 0.27 inch at Des Arc to 6.46 inches at Jonesboro. The greatest daily amount reported was 3.51 inches at Jonesboro on the 30th. No snowfall or hail was reported during the month. There was an average of 6 days on which 0.01 inch or more of precipitation was recorded.

The condition of the cotton crop during the month varied widely from locality to locality. The principal effect of the drought was to retard growth resulting in small plants. In most sections, the crop was fruiting well by the end of the third week, and putting on a large number of bolls. By the close of the month, many plants were shedding squares. While hot dry weather reduced the yield potential of much of the crop, it effectively held boll weevils in check, which was a compensating factor. In fact, insect activity of all kinds was at a low level throughout the month.

Rice made normal progress during the month, except in those fields where irrigation facilities are insufficient unless augmented by normal rainfall. Most of the early crop had been top-dressed with nitrogen by mid-month. During the last half of the month, many growers were applying chemicals for weed control. By the closing days, a few early fields were heading.

The greater portion of the early corn crop was a total loss. The only value realized from the crop was from that portion cut for fodder or silage. Late corn, while damaged by the hot dry weather, promised a fair crop as the month closed.

Soybeans held up fairly well despite the hot dry weather. The condition of the crop, however, varied widely. In the driest areas much of the crop was cut for hay. Blooms were reported during all but the first week. During the last week, many reports were received of the blooms blasting and not setting pods or seed.

The drought was especially damaging to truck crops. The yield of tomatoes, snap beans, cucumbers and other such vegetables was sharply reduced. Only a fair cantaloupe crop was harvested, but watermelons held up fairly well. Strawberry beds suffered considerable damage. Some old beds were lost, and new plants did not put out runners as they should. The harvest of the Elberta peach crop got underway during the last week. Peaches were of good quality but small in size.

Probably the most serious aspect of the drought was the feed situation. Hay and other feed crops were extensively damaged. There was local improvement of fields favored with rains during the critical period. Pastures and meadows generally suffered considerable damage and afforded very little feed for stock. Much stock was turned into timber land and hay pastures. Supplemental feeding was mostly shipped-in hay, which proved to be excessively expensive. While marketing of stock was fairly heavy, there was no widespread liquidation of herds.

### STORMS

During the afternoon of July 16, 1952, a series of three small tornadoes riginated at the Rondo community about three miles southeast of the Texarkana Airport, moving northwestward over the Airport to a point about one mile to the northwest. The first struck at 2:18 p.m. The funnel was observed by several persons. One house was destroyed in Rondo and a hangar at the Airport nearly destroyed. A horse was killed and several barns and outhouses either damaged or destroyed. There is evidence that another small tornado occurred at 3:15 p.m., but the funnel is believed not to have touched the ground. A third storm struck at 4:05 p.m. following almost exactly the same route as the first storm. It did swerve slightly in crossing the Airport, thus missing the airport buildings. It damaged a house in Rondo and destroyed a garage and several barns near Rondo. The storm also tore down 50 yards of fence and some power lines at the Airport. Damage from these storms is estimated at $12,150.

A wind and hail storm that struck Lead Hill at 4:00 p.m. of July 23, 1952, did an estimated $5,000 damage to roofs and store windows and $500 damage to stored hay.

A windstorm that struck Stephens at 5:00 p.m. of the 26th damaged roofs and shade trees. Some windows were blown in. No estimate of monetary loss is available.

### FLOODS

There was no flooding on the streams in Arkansas during July 1952.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

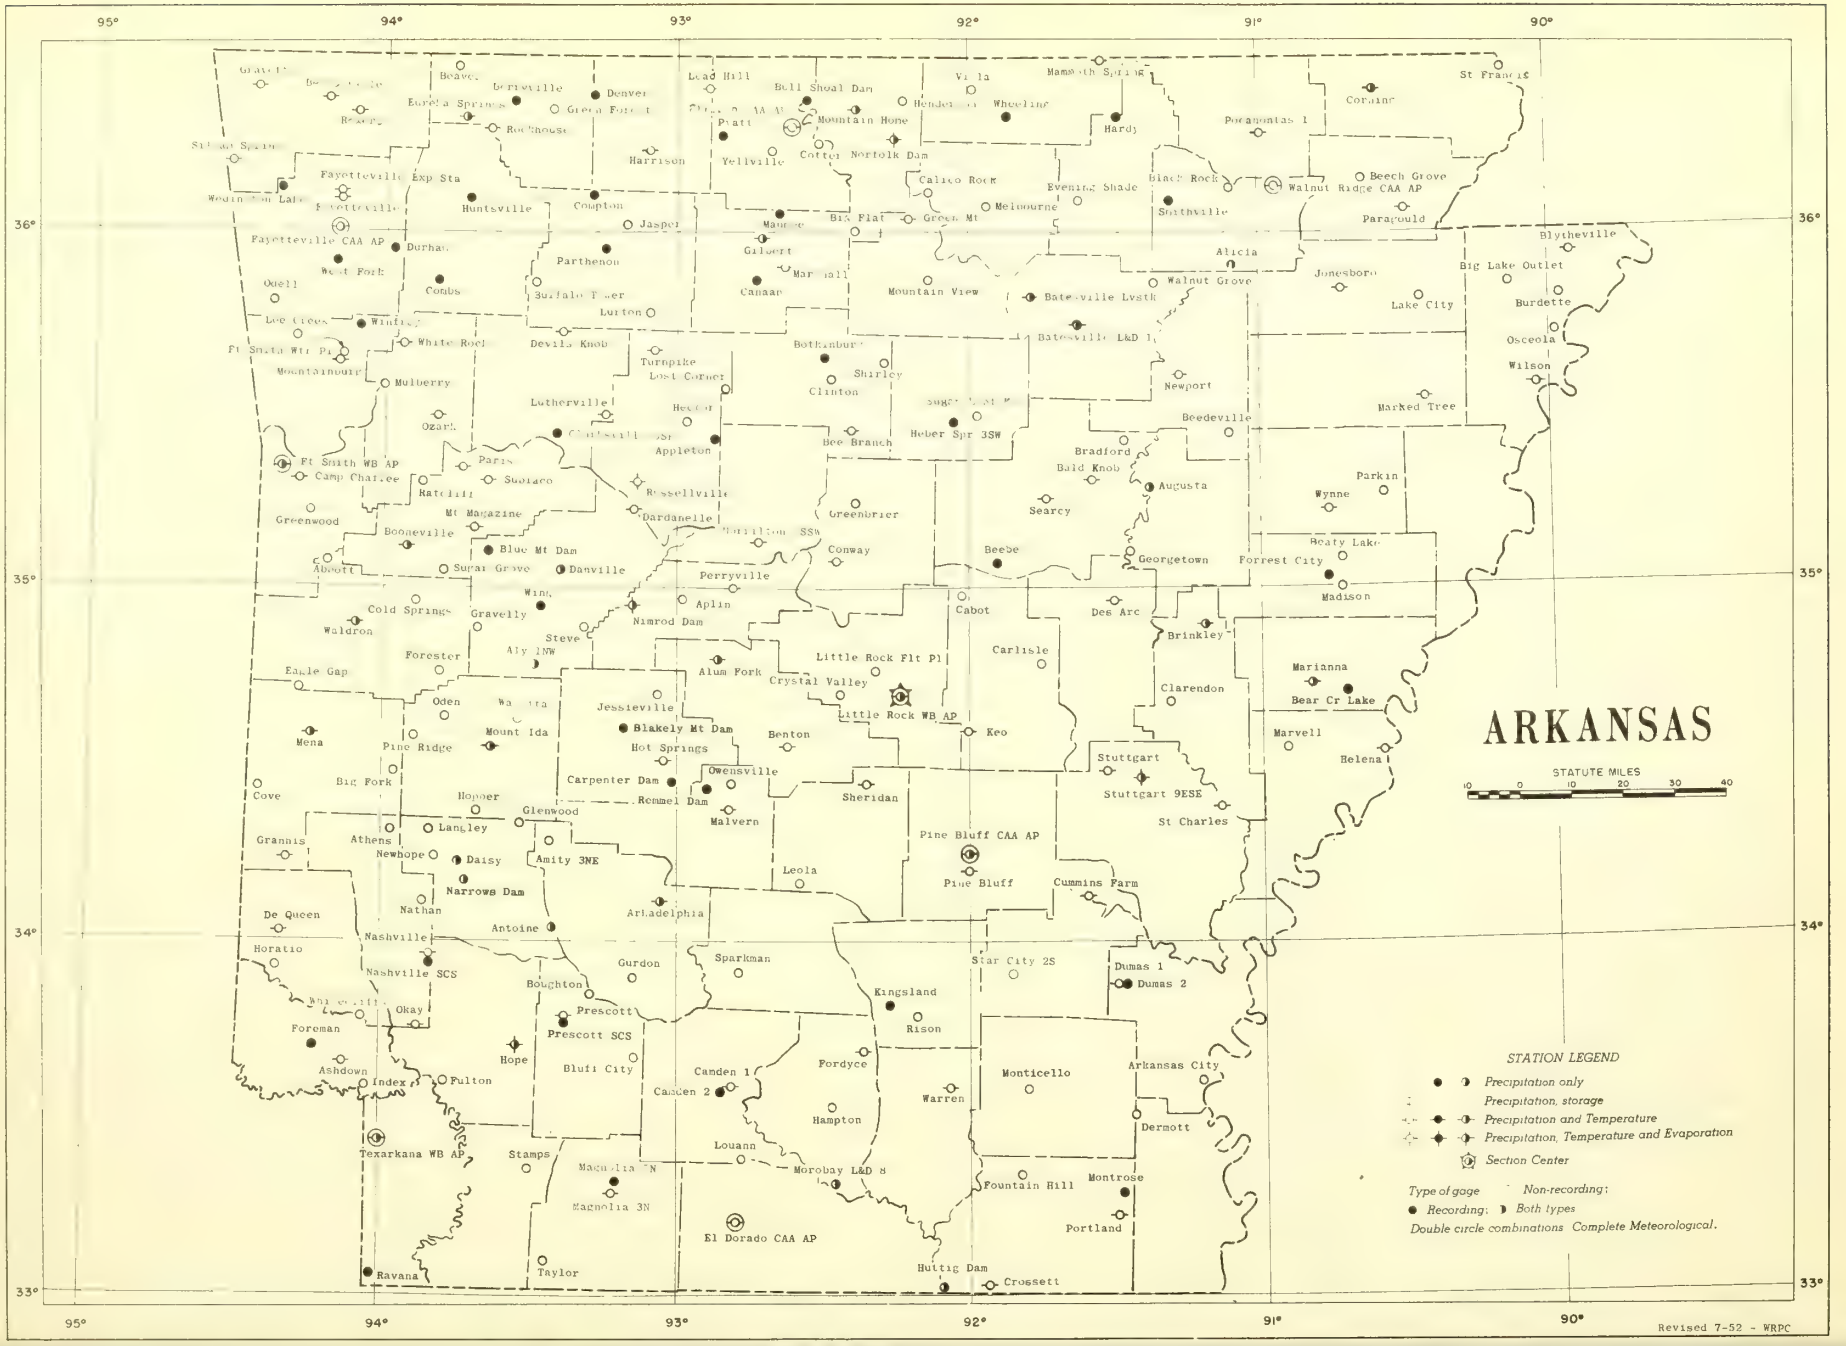
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

KANSAS CITY: 1952

## ARKANSAS - AUGUST 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

While drought conditions persisted in many localities, this was in general, the most favorable month of the summer for agriculture.

Temperatures averaged considerably above normal during the first half of the month but dropped to near normal during the latter half. The monthly mean temperature for the State was 81.1°, which is 1.1° above the normal. Monthly mean temperatures at individual stations ranged from 77.0° at Turnpike to 85.2° at Prescott. The highest temperature recorded was 110° at Conway on the 17th and the lowest 50° at Marshall on the 25th. There was an average of 25 days during the month on which the temperature rose to 90° or higher.

The monthly average precipitation for the State was 3.53 inches, which is 0.06 inch below normal. Monthly totals ranged from 0.82 inch at Madison to 10.83 inches at Rogers. The greatest daily amount reported was 4.73 inches at the Fayetteville Experiment Station on the 22nd. The station in the City of Fayetteville had 4.70 inches on the same date. During the month there was an average of seven days with 0.01 inch or more of rainfall.

Cotton showed a slow but steady improvement during the month. The crop was fruiting well in most areas as the month opened. Plants were below normal in size, and many were fruiting on top. Some plants were losing squares and small bolls in the drier areas. In South Arkansas, some early fields began to open during the second week. A few bales were reported to have been ginned during the third week. By the closing week, early cotton had stopped blooming in some fields, bolls were opening more rapidly and light picking was underway in many counties. Cotton insect infestation was generally very light, and control measures effective, in holding the pests in check.

At the beginning of the month, much of the rice crop was in critical condition due to water shortages. This condition, however, improved when rains augmented the supply. On some farms the water situation continued critical throughout the month. A few early sown fields were heading as the month opened. By the month's end heading was well along in many sections, and a few fields had been combined.

The soybean outlook was not at all good as the month opened. Plants were blooming but shedding was heavy. Many fields were being cut for hay. Rains during the month materially benefited the crop. Plants put on many new blooms which set pods. Blooms, however, continued to blast in the drier areas.

Early corn was beyond help at the beginning of the month. Late corn, however, made fair progress during the month with some in the soft dough stage by the third week. Much of the crop was cut for silage in an effort to compensate for dangerously short feed crops. Most of the early corn was cut for fodder and silage.

Sorghums generally made good growth. A considerable acreage of the crop was cut for fodder or silage.

Where soil conditions permitted, the preparation of land for winter grains progressed at a rapid rate. Seeding, however, proceeded slowly.

In most areas, pastures afforded very little feed at the beginning of the month, and cattlemen were resorting to supplemental feeding. Cattle were turned into meadows, woods and open ranges. In most localities where good showers occurred, pastures greened rapidly. In general, pastures furnished more feed as the month progressed. Cattle began to put on flesh during the latter half of the month.

The Elberta peach harvest was completed early in the month. The fruit was of good quality but did not size well. The watermelon harvest was nearing completion by the close of the month. Grape picking began early in the month and continued through the close. The apple harvest began during the last two weeks.

There were no severe storms nor floods during the month.-- JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

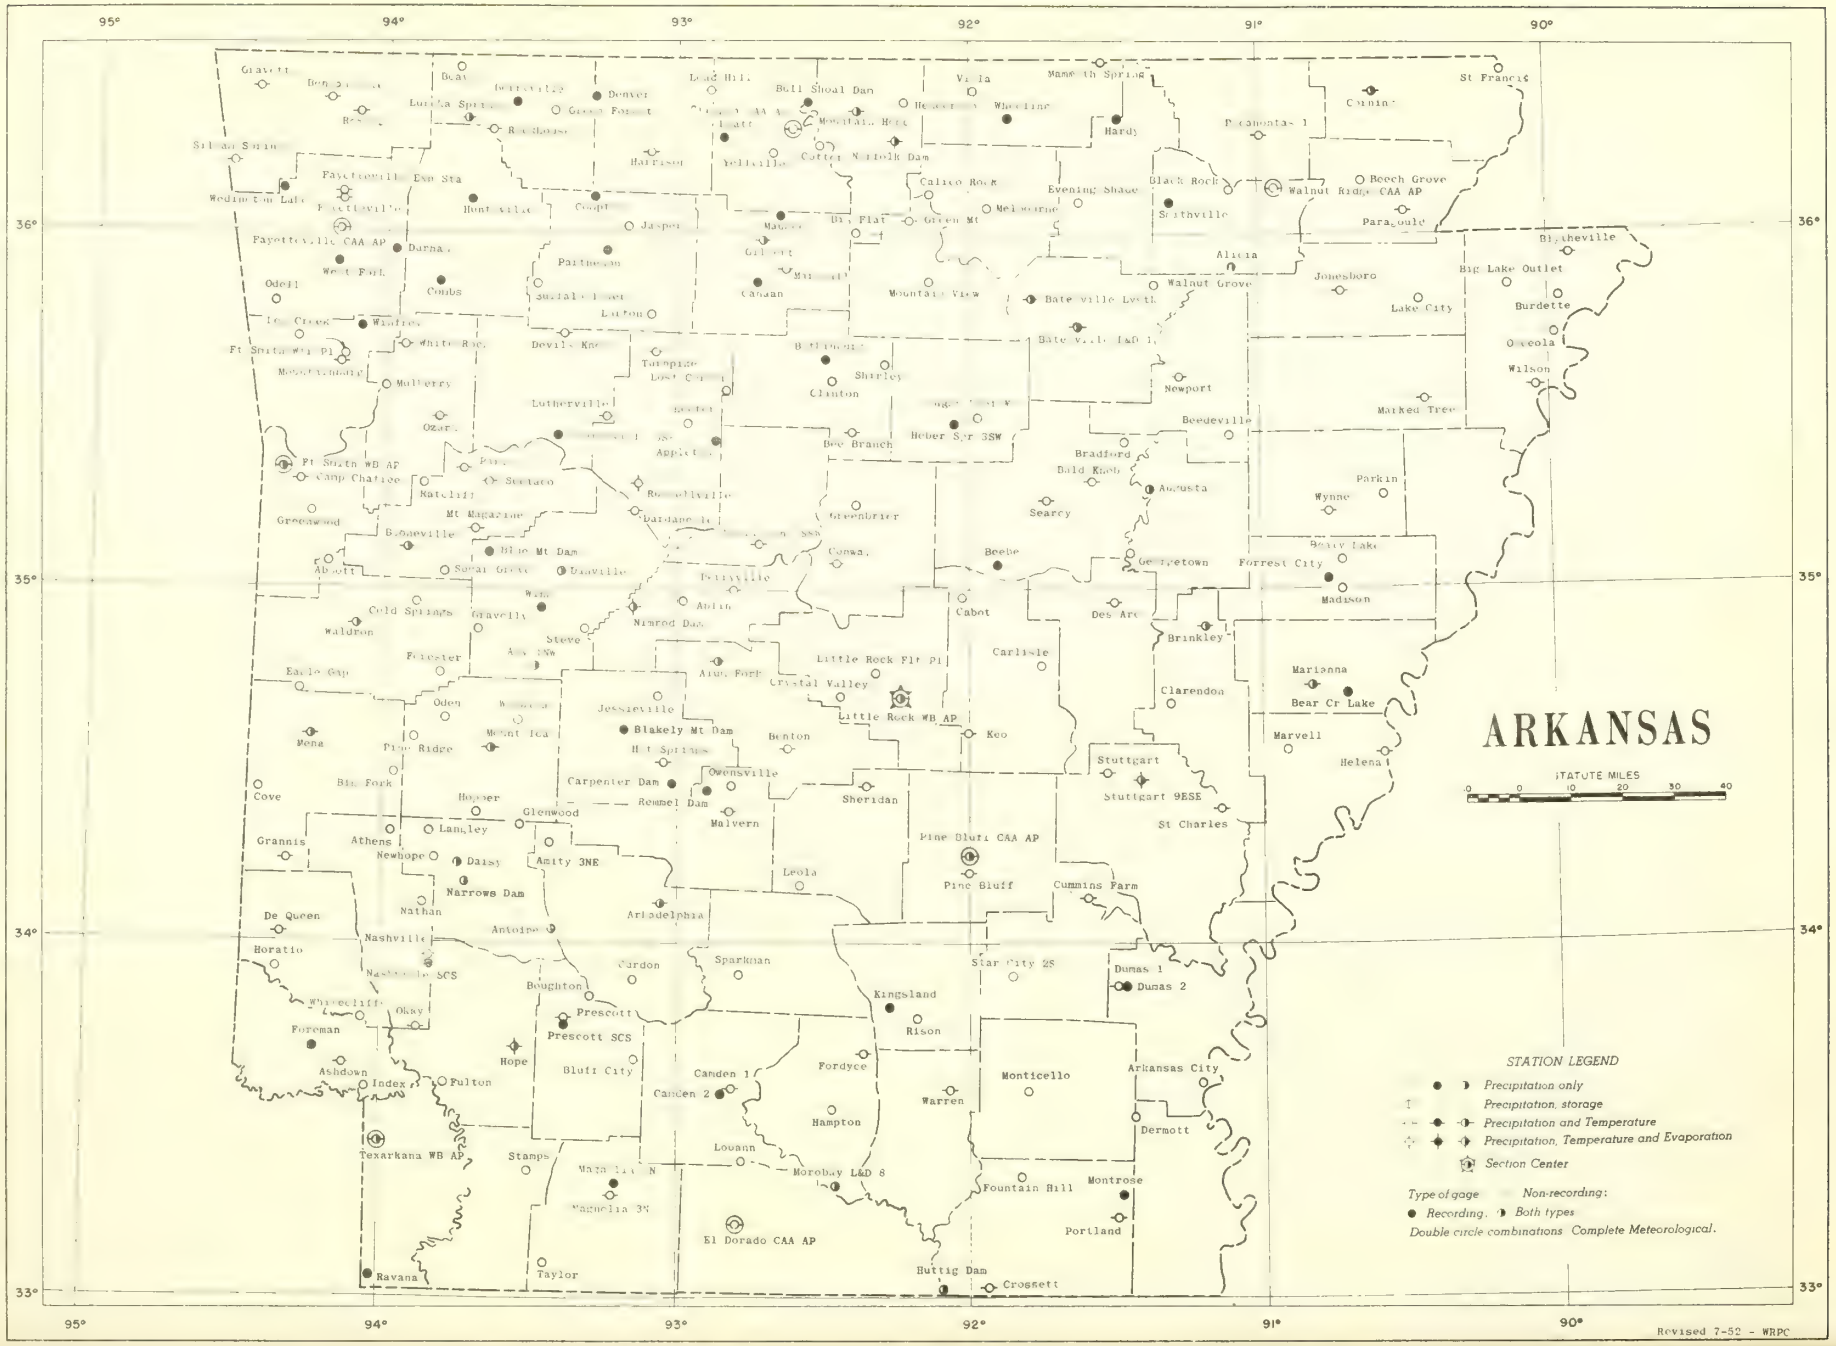
Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Hourly precipitation data from recorder substations are not available.

## ARKANSAS - SEPTEMBER 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Relatively cool dry weather prevailed over Arkansas during September 1952. Except for brief periods, the month's weather was almost ideal for the harvesting of crops.

The monthly average precipitation for the State was 2.04 inches, which is 1.28 inches below the normal. Monthly totals at individual stations ranged from no rain during the month at Hope to 5.73 inches at Helena. The greatest daily amount recorded was 4.81 inches at Saint Charles on the 18th. Traces of hail were recorded on the 1st at Bee Branch and on the 17th at Little Rock. There was an average of three days during the month with 0.01 inch or more of precipitation. Precipitation was quite general on the 1st, 17th and 20th.

The monthly mean temperature for the State was 71.7°, which is 2.4° below the normal. Monthly mean temperatures ranged from 66.8° at Gilbert and Harrison to 76.4° at Prescott. The highest temperature recorded was 104° at Booneville on the 1st and the lowest 34° at Harrison on the 24th. There was an average of twelve days on which the temperature rose to 90° or higher.

The picking of early cotton was well underway as the month opened. By the close of the first week most early cotton had cut out and was opening rapidly. Picking was in full swing by mid-month. Yields were above expectations in most sections. Grades were good but the staple shorter than usual. Late cotton was still blooming in some sections at mid-month, but much of it was cutting out by the end of the third week. There was some insect damage, but control measures were generally effective.

A few fields of early rice were being combined at the beginning of the month. The harvest did not, however, become general until after the middle of the month. Harvest was slow in getting underway on many farms because of delayed maturity due to cool nights. This situation resulted in some improvement in quality. Yields were generally fairly satisfactory with the best yields being reported from the southeastern counties.

Soybeans suffered from the hot, dry weather except in the northeastern counties. In many localities the plants either failed to set pods or those pods that did set failed to fill.

Early corn that had survived the drought was ready for harvest early in the month. Picking continued through the entire month. Yields were very light. A substantial acreage was either grazed or cut for fodder and silage. Late corn promised fair yields in most localities.

Grain sorghums did fairly well during the month and finished the month in what was perhaps the best condition of any feed crop. A very large tonnage of corn and sorghum silage was put up.

The hay and feed situation, while relieved somewhat by rains, continued critical throughout the month. Farmers did everything possible to salvage hay and feed by utilizing grasses and crops not ordinarily saved for hay or silage.

Pastures tended to green up where rains fell. These gains were, however, generally rather short lived. For the most part, cattle barely held their own or lost weight except in the more favored localities.

Dry weather caused considerable additional damage to strawberry beds. Rains benefited the plants in the main White County area, but plants continued to die in other sections. The harvest of tomatoes, grapes and peanuts was in progress during the month and the harvest of winter apples beginning as the month closed.

A large acreage of fall grains was sown. Seeding was retarded by dry soil in some sections but in many fields oats were "dusted in". Small grains generally came up to good stands in the northeastern portion, and some were being grazed by the close of the month.

At 8:00 p.m. of the evening of September 1st, lightning struck the high school at Dyess, Arkansas. The resultant fire caused an estimated $25,000 damage. No other severe storms were reported.

The streams over the State continued at low stages during the month.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

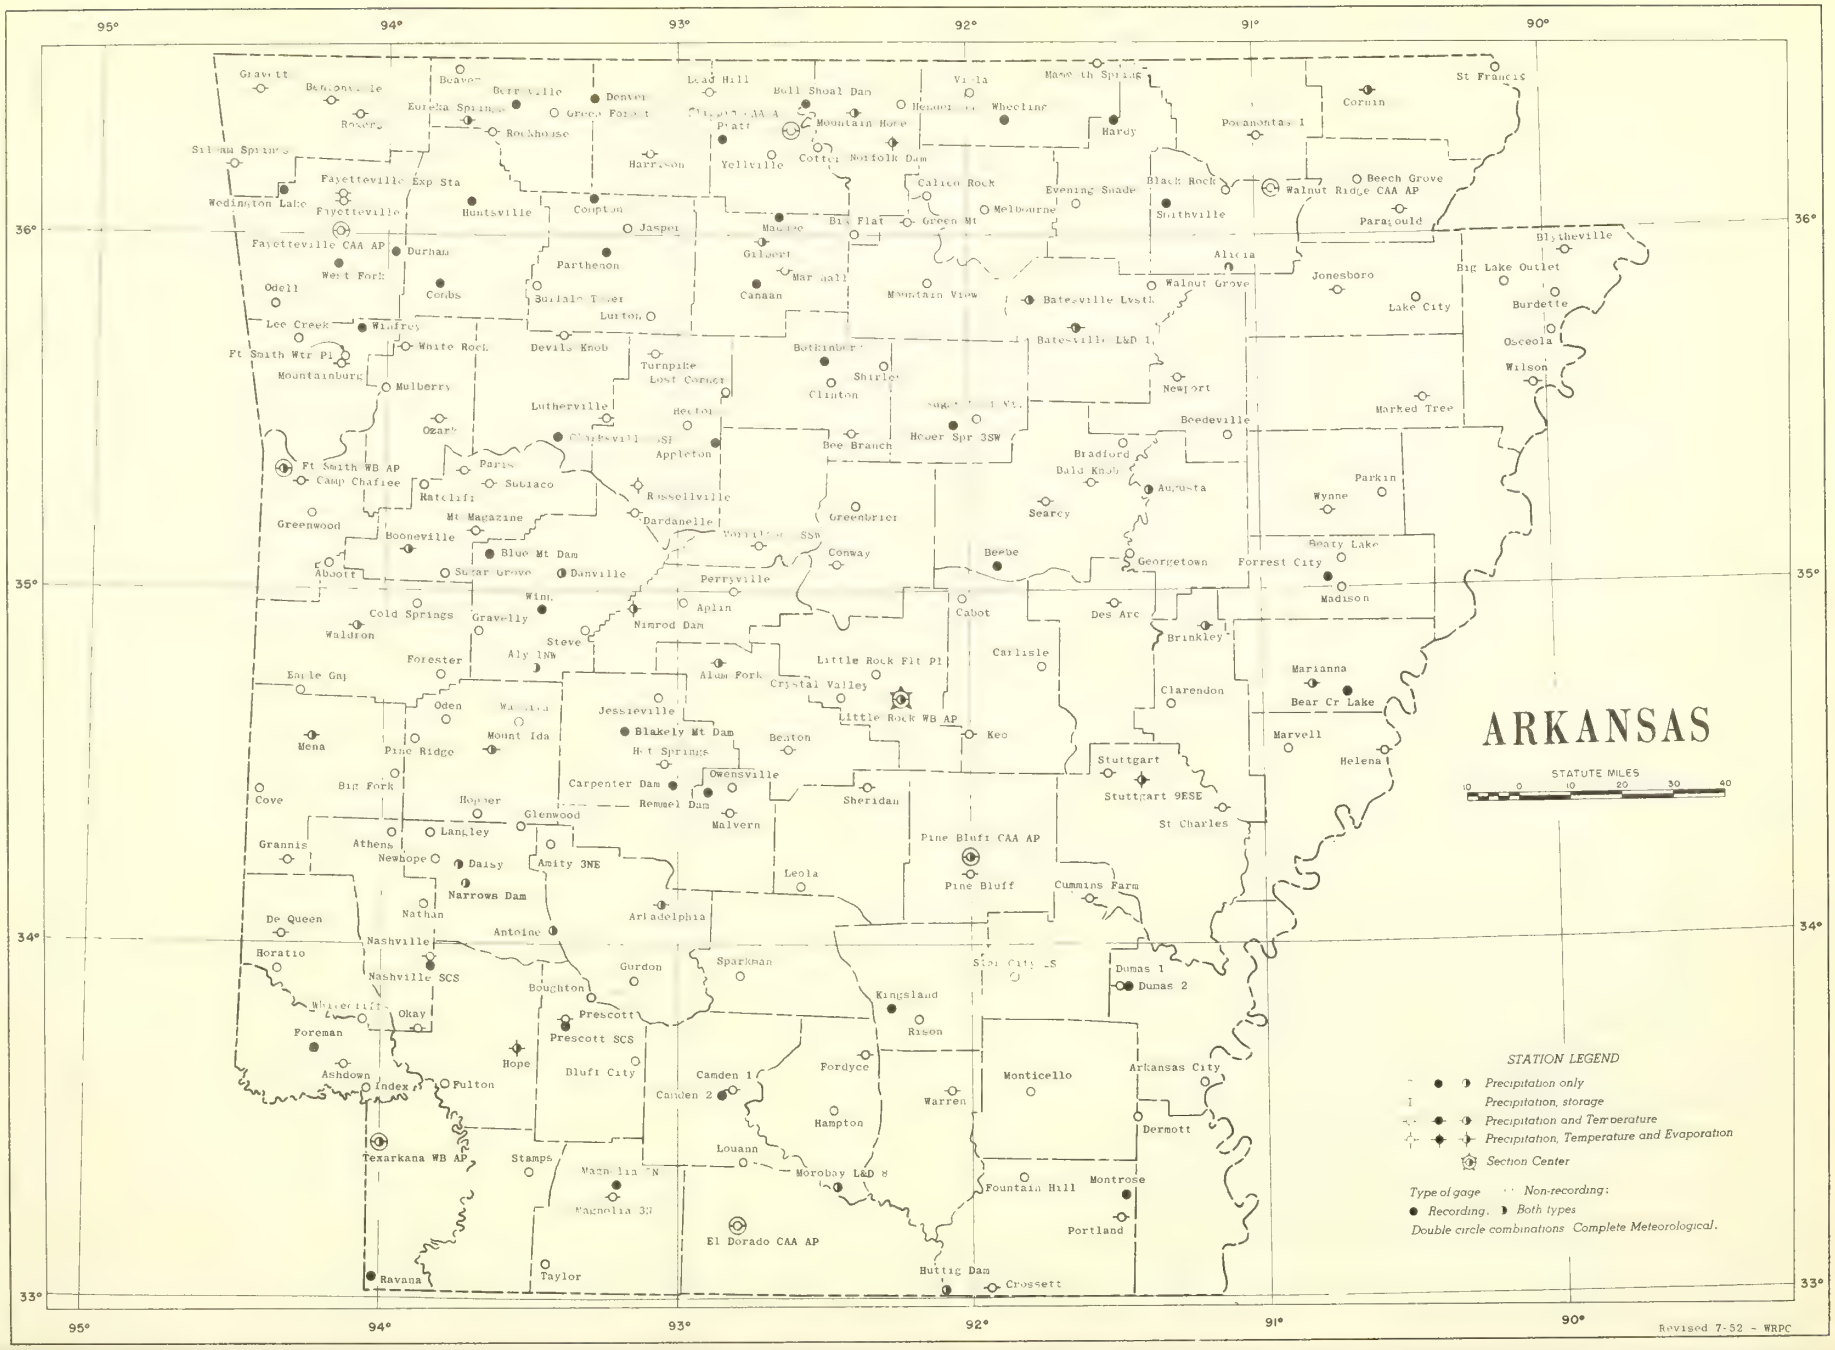
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Volume LVII No. 10

See note concerning "Hourly Precipitation Data" on page 114 of this issue.

KANSAS CITY: 1952

## ARKANSAS - OCTOBER 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The month of October, 1952, over Arkansas, was cool and dry. Nearly ideal harvest weather prevailed.

The average monthly precipitation for the State was 0.78 inch, which is 2.45 inches below normal, making this the fifth driest October since state-wide records were begun in 1891. The greatest monthly precipitation was 2.03 inches at Stuttgart, and the least a sprinkle too light to measure at Portland. The heaviest daily amount reported was 1.68 inches at Turnpike on the 6th. Sleet was reported on the 6th at Alum Fork, Brinkley, Helena and St. Charles, and hail on the 14th at Rogers. There was an average of two days with measurable precipitation during the month. Rainfall was general during 24 hours, ending the morning of the 6th, and quite general during the 24 hours ending the morning of the 15th. Otherwise, precipitation was mostly confined to scattered showers.

The monthly mean temperature for the State was 56.6°, which is 6.3° below the normal. Monthly mean temperatures at individual stations ranged from 50.8° at Gilbert to 62.3° at Hot Springs. The highest temperature recorded was 98° at DeQueen on the 1st, and the lowest 14° at Lead Hill on the 29th. On the 21st, records for lowest temperatures so early in the season were broken at Little Rock and several other points. There was an average of two days during the month when temperatures rose to 90° or higher, and nine days when they fell to 32° or lower.

Cotton bolls opened rapidly the opening weeks, hastened by frost in some localities. Freezes during the last two weeks spoiled quite a number of late bolls. Except for brief periods, picking progressed rapidly, and by the close of the month was 75 - 80% completed. This was reported to have been the earliest harvest in ten years.

The rice harvest was well under way as the month opened, and was about half completed by the close of the second week. By the end of the month, the harvest was 80 - 85% complete. Severe damage to late rice by frosts and freezing weather was reported from some localities.

The combining of soybeans continued through the month. Maturity of the crop was very uneven. In some instances, there were ripe soybeans, which were shattering, and immature soybeans on the same plant. A number of growers followed the combines with balers to save the stalks for much needed feed.

The harvest of corn and grain sorghums progressed at a steady rate during the month. Since many farmers were anxious to complete the harvest of these crops in order to be able to utilize the land for fall grains, every effort was made to expedite this work whenever it did not interfere with more important tasks. Yields were generally reported as fair to poor.

There was a limited hay harvest during the month, but most of the crop had been put up earlier. Since the hay crop was very short, a considerable quantity of low quality hay was salvaged.

Pastures revived briefly as a result of the rains of the 6th and 15th, but continued poor throughout the month. In most localities cattle either lost weight or barely held their own. Supplemental feeding was necessary in many areas by the end of the month. While the rains filled some stock ponds, the water situation remained serious, especially over the western half of the State.

As the result of extremely dry weather, a serious forest fire situation developed in many areas during the latter half of the month. By the close of the month, many fires were in progress, some of them extensive.

A large acreage of small grains was sown. Extremely dry weather caused some delays, especially over the western half of the State. In some sections, the seed was "dusted in". Over the drier areas, only poor stands and little growth were reported.

Canning tomatoes, green beans, fall potatoes and sweet potatoes were harvested during the month. By the end of the month, the threshing of peanuts was begun in Franklin County.

No severe storms or floods occurred during the month.--JFR.

### ANNOUNCEMENT

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# SUPPLEMENTAL DATA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

KANSAS CITY: 1953

## ARKANSAS - NOVEMBER 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This month saw general rains that finally broke the drought that had persisted over the State during the preceding summer and fall.

The average monthly precipitation for the State was 7.01 inches which is 3.21 inches above the normal, making this the wettest November since 1946. The greatest monthly total was 14.05 inches at Langley and the least 2.43 inches at Blytheville and Portland. The greatest daily total recorded was 8.00 inches at Langley on the 25th. The average monthly snowfall for the State was 1.5 inches most of which fell during the night of the 28-29th. The greatest monthly snowfall reported was 5.6 inches at Paris. Fifteen stations reported no snow during the month.

The monthly mean temperature for the State was 49.7°, which is 1.5° below the normal. Monthly mean temperatures at individual stations ranged from 44.7° at the Fayetteville CAA Station to 53.4° at Portland. The highest temperature recorded was 88° at Dardanelle on the 2nd and at Mount Ida on the 2nd and 3rd. The lowest temperature recorded was 9° at Gilbert and Gravette on the 9th. There was an average of 12 days on which the temperature fell to freezing or below.

The opening week of the month saw destructive forest, brush and grass fires raging out of control in many sections of the State. Much valuable timber was destroyed, along with some pastures and unharvested crops. The situation became so acute that all hunting seasons were suspended. The shortage of stock water became increasingly critical over most of the State, and in some localities the municipal water supply continued alarmingly low. The Fayetteville supply was extremely critical. The soil over much of the State was too dry and hard to be worked, and winter grains and cover crops that had been planted made very poor progress. On the brighter side, rapid progress was made with picking cotton, gathering corn, combining soybeans and harvesting rice.

General rains on the 9th, with one to four inch rains in most areas, put out the forest fires that had plagued the State for weeks. The relief was so wide spread that all hunting seasons were re-opened on the 10th. While these rains alleviated the drought in most sections of the State, they brought no permanent relief to crops or pastures.

A second period of general rains beginning late on the 17th and continuing through much of the 18th, gave precipitation amounts of one to four inches over most of the State, except for a few rather small areas. Fall sown grains and cover crops showed some improvement, and the critical stock water situation was relieved in most areas. The Fayetteville municipal water supply situation continued critical. Stock water remained scarce in some areas.

A third period of general rains on the 24th and 25th gave precipitation totals of as much as six inches. Precipitation was heaviest over the west-central and lightest over the southeastern sections of the State. These rains left only very small and isolated areas in need of additional precipitation. The Fayetteville municipal water supply situation still continued rather critical.

Cotton picking was generally completed early in the month, but remnant cotton was picked throughout the month.

A limited harvest continued through the month, with some corn being gathered, rice threshed and soybeans combined. Because of favorable harvest weather prevailing during the fall, only a small amount of most crops remained to be harvested as the month opened.

Fall plowing and planting were delayed by dry soil during the fall. This situation was relieved by this month's rains, and rapid progress was made during the latter half.

Pastures and cover crops revived somewhat during the latter half of the month. Winter grains showed some improvement.

### STORMS

At 1:00 a.m. of the morning of November 9th, a severe windstorm struck the north edge of the City of Harrison, demolishing the screen of a Drive-In Theater, destroying an industrial smoke stack, and damaging some timber. Total damage was estimated at $15,000.

At 4:30 p.m. of the 17th, a tornado struck a point 10 miles west of Mena in Polk County. At 4:45 a.m. it was reported at a point about 5 miles south of Waldron in Scott County. The storm was last reported about 5 miles north of Pleasant Valley Community in Scott County. The entire path was about 40 miles in length. Damage in Polk County was two barns destroyed, timber damaged, and hay destroyed in fields. Damage in Scott County was more extensive, including one house destroyed, 12 houses damaged, considerable damage to timber and several farm animals killed. Two persons were injured when their house was destroyed. Total monetary damage was estimated at $25,000.

Between 1:30 p.m. of the 26th and 11:00 a.m. of the 27th, high gusty winds buffeted the City of Harrison. Damage was confined to some roofs in the City. Total monetary loss was estimated at $1,000.

### FLOODS

The only flooding on the streams in Arkansas during the month of November 1952 was a stage of 18.9 feet at Arkadelphia on the 26th. This stage was 1.9 feet above flood stage. No damage was reported.

### ANNOUNCEMENT

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

KANSAS CITY: 1953

## ARKANSAS - DECEMBER 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The month of December 1952 over Arkansas brought near normal temperatures and below-normal precipitation. General rains the latter half of November and the first four days of December alleviated the drought conditions that had persisted over the State through the preceding summer and fall months.

The monthly mean temperature for the State was 42.7°, which is 0.1° below the normal. At individual stations, monthly mean temperatures ranged from 37.8° at Gravette to 46.8° at Portland. The highest temperature reported was 80° at Crossett on the 9th, and the lowest 12° at Lead Hill on the 13th. Temperatures fell to freezing, or lower, on an average of 18 days during the month.

The average monthly precipitation for the State was 3.66 inches, which is 0.53 inch below the normal. The greatest monthly total reported was 7.97 inches at Searcy, and the least 1.21 inches at Fayetteville. The greatest daily precipitation was 5.86 inches at Searcy on the 4th. During the month, there was an average of 7 days with .01 inch, or more, of precipitation. Snow flurries were quite general on the 14th, but amounts were very light. The heaviest snow reported was 0.1 inch at Amity on that day. A severe hailstorm occurred at 1:30 p.m. of the 9th at Lepanto in eastern Poinsett County.

Heavy rains were general on the 3rd and early on the 4th. These rains caused flooding on the Ouachita, Petit Jean and Little Red Rivers and on several small streams over the State. Most stock ponds were filled, and the critical water supply situation either ended or alleviated. Soil moisture was reported adequate to abundant in all sections of the State by the close of the first week and continued adequate throughout the month in most areas.

Farm activity during the month was limited to picking remnant cotton, gathering some late corn, plowing, fencing, butchering and other usual late fall and early winter activities. In general, the weather during the month was favorable for all forms of outdoor work and recreation.

Winter grains and cover crops made good progress, and pastures and meadows showed marked improvement during the month. As a result of adequate water and better pastures, livestock made good progress.

### STORMS

A severe hailstorm struck Lepanto at 1:30 p.m. of the 9th. The approach of the storm was heralded by a loud roar as it moved in from the southwest. Stones weighing as much as 5 1/2 ounces were reported. Most severe damage was to the high and elementary schools, where 226 window panes were broken. Three school children were injured by flying glass. Severe damaged was reported in other parts of the town, mostly to windows, roofs and automobiles. Since most crops had been harvested, crop damage was negligible.

### FLOODS

Moderate to heavy rains were general over the Little Rock District on December 3rd and early on the 4th. From 3 to 6 inches of precipitation fell on the basin of the Little Red River; from 2 to 5 inches on the Middle White River Basin; from 2 to 5 inches on the Upper Middle Ouachita River Basin; from 3 to 3 1/2 inches on the watershed of the Arkansas River between Morrilton and Little Rock. The Little Red River rose rapidly, cresting at 24.1 feet at Sugar Loaf at 1:00 a.m. on the 5th and at 33.8 feet at Judsonia at 10:00 p.m. of the same day. The Ouachita River rose sharply at Arkadelphia, cresting at 25.0 feet during the evening of the 4th, and more slowly on the lower reaches, cresting at 27.9 feet at Camden on the 8th. Other streams in the District rose sharply but did not reach flood stages.

On the Little Red River, damage in the Sugar Loaf area was estimated at $5,000, and in the Judsonia area at $375.00. Prompt flood warnings enabled everyone in the Judsonia area to move from the lowlands.

On the Ouachita River, damage in the Arkadelphia area was estimated at $1,500. It is estimated that prompt distribution of flood warnings by radio enabled farmers to save a considerable amount of livestock. Monetary savings were estimated at $2,500. Damage in the Camden area was negligible.

The flash flood at 4:30 p.m. of the 3rd on the South Fork of the Saline River at the campus of the South-Central Bible College, 7 miles north of Hot Springs, inundated several buildings, damaged 32 homes, made several students homeless and caused several thousand dollars damage to buildings and equipment.--JFR

ANNOUNCEMENT

Hourly precipitation data were published in Climatological Data through September 1951, at which time it was necessary to discontinue publication of hourly amounts, because of withdrawal of fiscal support.

Recent developments make possible the resumption of publication of these data in a new bulletin entitled "Hourly Precipitation Data". There will be one bulletin for each of the 42 climatological sections in the United States and one for Alaska. (Climatological sections correspond to States except that the six New England States comprise a single section and Maryland and Delaware comprise another.)

"Hourly Precipitation Data" will be issued monthly, with an annual summary issue. The first month to be published will be October 1951, and publications thereafter will be as rapid and as regular as funds permit. The price will be 10 cents per copy; $1.00 per year (including the annual). Checks and money orders for subscriptions should be made payable to the "Treasurer of the United States". Remittances and correspondence should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## CORRECTIONS

February-July 1952, Add degree day totals to Table 2 as follows:
Blytheville - Feb. 535, Apr. 205, May 21, June 0, July 0
Dardanelle - Feb. 514, March 512, Apr. 262, June 0, July 0
Wilson - Apr. 207, May 23, June 0, July 0

November 1952, Weather Summary, third paragraph, fourth line, change 9th to 28th.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

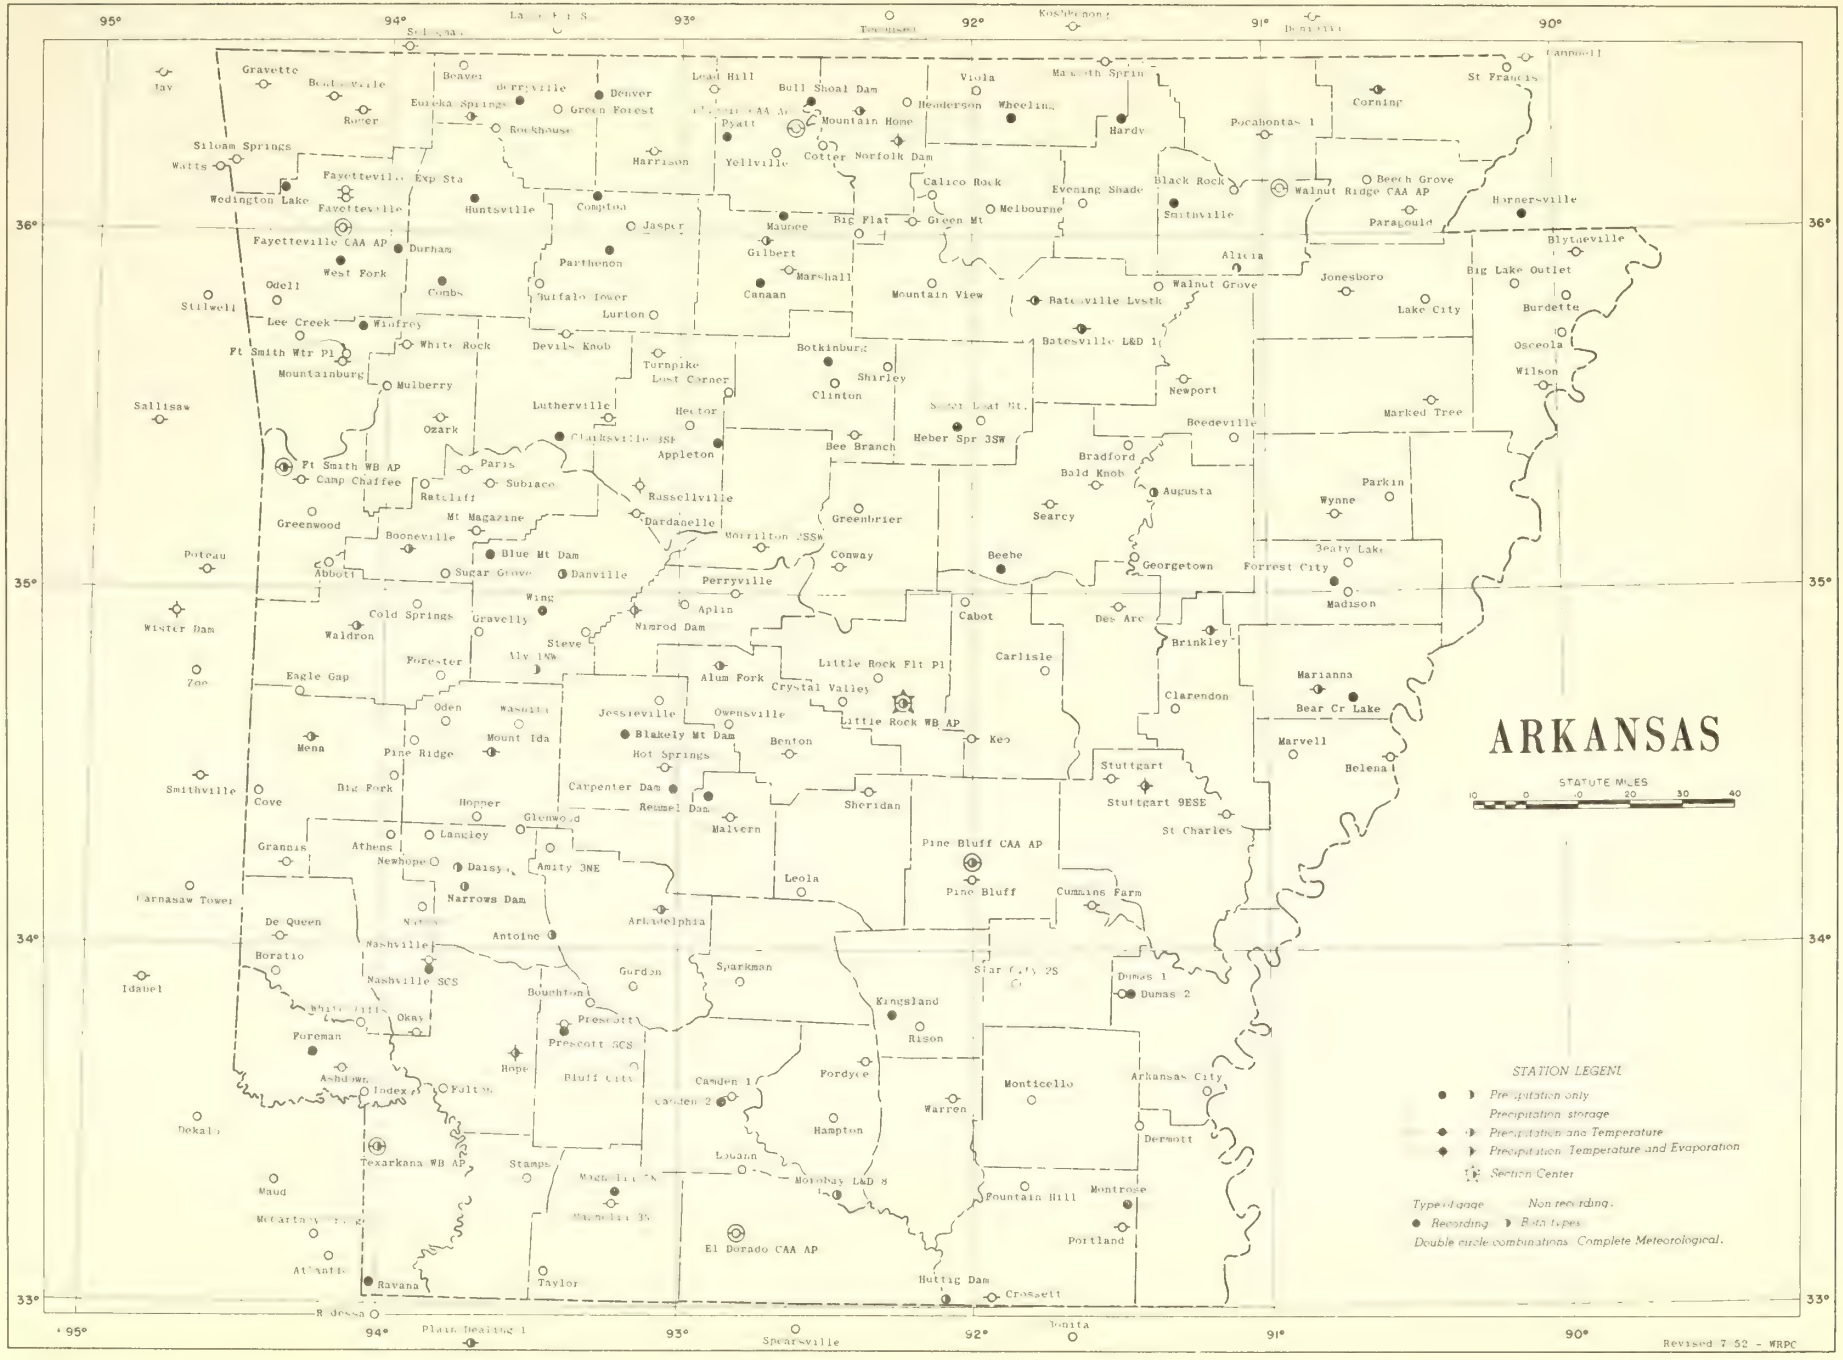
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 2-16-53 -- 1110

Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

## ARKANSAS

## ANNUAL SUMMARY 1952

Volume LVII No. 13

KANSAS CITY: 1953

# ARKANSAS - 1952

Walter C. Hickmon, Section Director - Little Rock

## WEATHER SUMMARY

The most outstanding features of the weather over Arkansas during 1952 were the drought that persisted during the summer and fall months and the destructive tornadoes that traversed the State from southwest to northeast on March 21st.

Precipitation averaged below normal every month except February, March, April and November. The average annual precipitation over the State was 43.12 inches, which was 5.70 inches below, or 88% of the normal. Annual totals ranged from 32.14 inches at the Fort Smith Airport to 63.09 inches at Big Fork. The greatest monthly average for the State was 7.01 inches in November and the least, 0.49 inch in June. The greatest monthly total recorded was 14.05 inches at Langley in November. New Hope had a total of 14.00 inches in April. The greatest daily amount reported was 8.00 inches at Langley on November 25th. There was an average of 74 days with 0.01 inch or more of precipitation. Heaviest snowfall was in February, when the monthly average for the State was 2.9 inches.

The mean annual temperature for the State was 61.6°, which is 0.2° above the normal. Annual mean temperatures at individual stations ranged from 57.5° at the Fayetteville CAA Station to 64.9° at Pine Bluff. The warmest month was July with a mean temperature of 82.4°, and the coolest was December with a mean temperature of 42.7°. The highest temperature recorded was 110° at Conway on August 17th and the lowest 2° at Lead Hill on February 17th.

## SYNOPSIS BY MONTHS

JANUARY: This was the fifth warmest January on record in Arkansas. The monthly mean temperature for the State was 47.3°, which is 6.1° above the normal. The average monthly precipitation was 3.86 inches, which is 0.58 inch below the normal. Warm, wet weather during the first half of the month was favorable for winter grains, cover crops, pastures and strawberry plants but delayed the preparation of fields for spring planting. Unseasonably warm, dry weather during the last half of the month was extremely favorable for planting and all outdoor work. Buds were reported to be swelling as early as the middle of the month; and by the close, there was considerable apprehension for the safety of fruit.

An extensive storm of freezing rain and sleet covered much of the northern portion of the State on the 2nd, 3rd and 4th. Damage was extensive, including $100,000 to power lines and $77,000 to telephone lines. At 3:30 p.m. of the 26th, a small tornado struck near Almyra and Stuttgart in Arkansas County. About 30 minutes later, a second tornado struck the same area. Property damage was estimated at $10,000. General rains on the first 4 days of the month caused rises on the streams of the State and flooding on the Ouachita River. Flood damage was negligible.

FEBRUARY: Warm, sunny weather prevailed over Arkansas during February 1952. The monthly mean temperature was 48.4°, which is 4.7° above the normal, making this the warmest February since 1938. The average monthly precipitation for the State was 3.63 inches, which is 0.04 inch above the normal. Warm, open weather permitted rapid progress with plowing and the preparation of seed beds, with only brief periods when the ground was too wet to be worked. In general, vegetation advanced steadily during the month. A few strawberry blooms were reported shortly after the middle of the month, and by the close, peaches were showing pink, and plums and cherries were in full bloom.

At 4:30 p.m. of the 13th, a small tornado demolished a home in the Buckeye Community of Mississippi County, 8 miles to the north of Manila. The storm also tore the roof off another home and scattered several outbuildings. Five members of one family were injured, two of them seriously. The funnel was observed from Manila. Flooding during the month was confined to the Lower White and Lower Black Rivers and was due principally to high water from the previous month. Damage was negligible.

MARCH: The most outstanding features of the weather over Arkansas during March 1952 were widespread wind and hail storms over the northern half of the State on the 3rd and a series of three extremely destructive tornadoes which traversed the State from southwest to northeast during the afternoon and evening of the 21st. This was the greatest tornado disaster ever to strike the State. During the afternoon and evening, 111 persons were killed and 772 injured. Three hundred eighty-five of the injured required hospitalization. Total property damage was estimated at $6,745,000. The Searcy-Kensett-Judsonia-Bald Knob area of White County was the hardest hit. The town of Judsonia was almost completely leveled.

The mean monthly temperature for the State was 50.1°, which is 2.3° above the normal. The average precipitation for the month was 5.59 inches, which is 0.83 inch above the normal. Monthly totals at individual stations ranged from 2.37 inches at Louann to 10.08 inches at Mount Ida. The principal agricultural activity during the month was the preparation of seed beds and spring planting. This work progressed normally in most localities. Potato planting began early in the month and the planting of corn and spring oats near the middle. Fruit trees were blooming as the month opened. Despite frosts and periods of freezing weather, damage to fruit was slight. There was minor flooding on all streams except the Arkansas River. Damage was slight.

APRIL: The first three weeks of the month were cool and wet. Conditions during this period were generally unfavorable for the preparation of seed beds, spring planting or the germination of seeds. Warm, sunny weather during the last week brought an upswing in agricultural activity. The monthly mean temperature was 58.1°, which is 3.5° below the normal. The average precipitation for the State was 5.88 inches, which is 0.94 inch above the normal. Heaviest monthly rainfall was 14.00 inches at Newhope. Monthly totals exceeding 10 inches were reported by 22 stations. The planting of cotton was seriously delayed during the first three weeks but was generally well along by the close of the month. The planting of rice and corn was also delayed by wet fields with progress being mostly confined to the closing week. In contrast, the month's weather was favorable for small grains and pastures, and miscellaneous truck crops generally made satisfactory progress.

A small tornado, one and one-half miles north of Magnolia at 6:45 p.m. of the 22nd caused property damage estimated at $55.00. At 7:15 p.m. of the same evening, a small tornado struck near the Pleasant Valley Cemetery, 8 miles north of Batesville, doing damage estimated at $1,050. No injuries were reported from either storm.

MAY: This month's weather was generally favorable for crop growth. The monthly mean temperature for the State was 68.9°, which is 0.2° below the normal. The average monthly precipitation for the State was 4.14 inches, which is 0.97 inch below the normal. The month's weather, while not ideal for cotton, was not too unfavorable. Cotton got off to a rather poor start due to dry and unseasonably cool weather, seedling diseases, delayed germination, cut worms and difficulties with pre-emergence chemicals. While the seeding of rice was delayed by dry weather, only a small acreage remained to be sown at the close. By mid-month, most early corn had been planted and a considerable amount up and cultivated. Fruits, berries and truck crops made satisfactory progress.

A wind and thunderstorm struck West Memphis at 4:30 p.m. of the 7th. A hailstorm struck DeQueen and vicinity during the evening of the 9th. During the early morning of the 10th, a series of wind storms, with local hail, swept across the southern portion of the State from the Texas border to the Mississippi River. During the late morning of the 23rd, a series of wind storms struck the southwest portion of the State. During the month, storms injured three persons and caused property damage estimated at $563,825, of which $119,800 was to crops.

There was flooding during the early part of the month on the Black, White and Ouachita Rivers. Since all flooding was due to continued high water from the rains in April, damage was negligible except for the loss of the use of agricultural land adjacent to the streams.

JUNE: This was the driest and the second hottest June over Arkansas since statewide records were begun in 1891. The average monthly precipitation was 0.49 inch, which is only slightly over half of the 0.87 inch recorded during the previous driest June, which occurred in 1930. The monthly mean temperature for the State was 82.1°, which was exceeded only by 82.3° in June of 1914 and 1925. At the beginning of the month, soil moisture was adequate in all sections, and warm, dry weather was urgently needed in the cotton areas; but by the close, the growth of late plantings was slowed by lack of moisture. Older cotton stood up well. Rice made good progress, but much water was used. Corn made excellent growth the first two weeks, but the last two weeks were unfavorable. Soybeans made excellent progress the first two weeks and fair progress during the remainder of the month. The oat harvest was completed with many counties reporting record yields.

A tornado funnel formed in a cotton field five miles north of Walnut Ridge at 3:30 p.m. of the 4th, causing only slight damage. At 2:30 p.m. of the 18th a tornado struck near Scott. Damage was confined to a narrow swath through some small timber and the desruction of two small barns. At 4:15 p.m. of the 19th a wind and hail storm moved across the southern and eastern parts of West Memphis, causing an estimated $25,000 in damage. There were no floods.

JULY: Drought conditions, beginning early in the previous June, continued through July. Scattered showers, falling at various times during the month, brought only temporary relief to most areas. The monthly mean temperature for the State was 82.4°, which is 1.9° above the normal. The average monthly precipitation over the State was 2.51 inches, which is 1.23 inches below the normal. The condition of cotton varied widely from locality to locality. The principal effect of the drought was to retard growth, resulting in small plants. Rice made normal progress, except where irrigation facilities were inadequate without normal rainfall. By the close of the month, it was evident that most early corn was a total loss. Soybeans stood up fairly well. The drought was especially damaging to truck crops. One of the more serious results of the drought was the feed situation. Hay and other feed crops were extensively damaged.

During the afternoon of the 16th a series of three small tornadoes originated at the Rondo Community, three miles southeast of the Texarkana Airport, and moved northwestward over the Airport to a point about one mile to the northwest. The first struck at 2:15 p.m., apparently a second passed aloft at 3:15 p.m. and a third struck at 4:05 p.m. Total damage was estimated at $12,150. A wind and hail storm struck Lead Hill on July 23rd, doing $5,500 damage. A windstorm struck Stephens on the 26th, causing slight damage. There were no floods during the month.

AUGUST: While drought conditions persisted in many localities, this was, in general, the most favorable month of the summer for agriculture. Temperatures averaged considerably above normal the first half of the month, but dropped to near normal the latter half. The monthly mean temperature for the State was 81.1°, which is 1.1° above normal. The monthly average precipitation for the State was 3.53 inches, which is 0.06 inch below normal. Cotton showed a slow but steady improvement during the month, while plants continued below normal in size. A few bales were ginned during the 3rd week. The condition of rice improved as rains augmented the water supply. Rains also benefited soybeans. While early corn was beyond help, late corn made fair progress. The peach crop gave fruit of good quality but small size. There were no severe storms or floods during the month.

SEPTEMBER: Relatively cool, dry weather prevailed during the month. Conditions were almost ideal for the harvesting of crops. The average precipitation for the State was 2.04 inches, which is 1.28 inches below the normal. The monthly mean temperature for the State was 71.7°, which is 2.4° below the normal. Cotton picking was underway as the month opened and in full swing by mid-month. Yields were above expectation and grades good. Rice harvest was slow in getting underway and did not become general until mid-month. Yields were generally satisfactory. In many localities, soybeans either failed to set pods, or those pods that did set failed to fill. Late corn promised fair yields in most localities. The hay and feed situation continued critical. Pastures tended to green up where rains fell, but the gains were generally short-lived. For the most part, cattle either held their own or lost weight. A large acreage of fall grains was sown.

During the evening of the 1st, lightning caused a fire that destroyed the high school at Dyess. The streams of the State continued at low stages throughout the month.

OCTOBER: The weather during the month was cool and dry and nearly ideal for the harvest. The average monthly precipitation over the State was 0.78 inch, which is 2.45 inches below normal, making this the fifth driest October on record in Arkansas. The monthly mean temperature was 56.6°, which is 6.3° below the normal. The picking of cotton was 75-80% completed by the close of the month. This was reported to have been the earliest harvest in ten years. The rice harvest was 80-85% completed by the close of the month. Frosts and freezing weather caused severe damage to late rice in some localities. The maturity of soybeans was very uneven. As a result, combining continued throughout the month. The harvest of corn and grain sorghums continued at a steady rate during the month. Pastures continued poor despite a brief revival due to rains early in the month. Dry weather created a serious forest fire situation during the latter half of the month. No severe storms or floods occurred.

NOVEMBER: This month saw general rains that finally broke the drought that had persisted over the State during the preceding summer and fall. The average monthly precipitation over the State was 7.01 inches, making this the wettest November since 1946. The monthly mean temperature for the State was 49.7°, which is 1.5° below the normal. During the opening week, brush, grass and forest fires raged out of control in many localities. Much valuable timber was destroyed. The shortage of stock water became acute, and some municipal water supplies ran alarmingly low. General one to 4 inch rains on the 9th put an end to forest, grass and brush fires, but brought no permanent relief to crops or pastures. A second period of rains on the 17th and 18th helped fall sown grains and cover crops. The critical stock water situation was relieved, but some municipal water supplies continued low. A third period of general rains on the 24th and 25th left only small local areas in need of additional moisture. Pastures and cover crops revived somewhat, and winter grains showed some improvement.

On the 9th, a severe windstorm struck the north edge of the City of Harrison, causing damage estimated at $15,000. At 4:30 p.m. of the 17th, a tornado struck a point 10 miles west of Mena and moved northeastward, touching ground occasionally over a path 40 miles in length to a point about five miles north of Pleasant Valley Community in Scott County. Two persons were injured, and property damage was estimated at $25,000. On the 27th, high, gusty winds buffeted the City of Harrison. The only flooding was on the Ouachita River at Arkadelphia on the 19th.

DECEMBER: The month brought near normal temperatures and below-normal precipitation. General rains the latter half of November and the first four days of December alleviated drought conditions that had persisted through the preceding summer and fall months. The monthly mean temperature for the State was 42.7°, which is 0.1° below the normal. The average monthly precipitation was 3.66 inches, which is 0.53 inch below the normal. Farm activity during the month was limited to picking remnant cotton, gathering some late corn, plowing, fencing, butchering and other late fall and winter chores. In general, the weather was favorable for all outdoor work. Winter grains made good progress while pastures and meadows showed marked improvement. As a result, livestock improved.

A severe hailstorm struck Lepanto on the 9th. Stones weighing 5 1/2 ounces were reported. Most severe damage was to the High and Elementary Schools, where three children were injured by flying glass.

Moderate to heavy rains on the 3rd and 4th caused flooding on the Ouachita, Little Red, and on the South Fork of the Saline River, 7 miles north of Hot Springs. Other streams rose sharply.--JFR

## RELOCATIONS OR CHANGES IN EXPOSURE OF INSTRUMENTS

STATIONS PUBLISHED IN CLIMATOLOGICAL DATA BULLETIN:

Alicia: Equipment moved 1/4 mile southwest on November 6.

Aly 1 NW: Equipment moved 1 mile east and 1 mile north on April 16.

Augusta: Rain gage moved 0.4 mile northeast on November 5.

Batesville L & D 1: Equipment moved 1500 feet northwest on January 24. Moved 1500 feet southeast on July 1.

Booneville: Equipment moved 25 feet north on January 31.

Boughton: Rain gage moved 0.5 mile southwest on December 1.

Brinkley: Equipment moved 40 feet southeast on January 18.

De Queen: Equipment moved 1 1/4 mile northeast on December 2.

Georgetown: Rain gage moved 0.3 mile east-northeast on November 13.

Glenwood: Rain gage moved 500 feet northeast on April 1.

Gravette: Rain gage moved 40 feet southeast on October 15.

Henderson 2 W: Rain gage moved 2 miles west on November 7.

Mountain View: Rain gage moved 0.6 mile east-southeast on January 1. Moved 0.6 mile west on July 13.

Newport: Equipment moved 1.2 mile west-southwest on June 1. Moved 3 1/2 blocks east-southeast on June 6.

Pocahontas: Equipment moved one block west and 1/2 block north on December 11.

Stamps: Rain gage moved 4 blocks east on February 20.

Yellville: Rain gage moved 2 1/2 miles southeast on March 20.

STATIONS PUBLISHED IN HOURLY PRECIPITATION DATA BULLETIN:

Blue Mountain Dam: Recording gage moved 150 feet northwest on January 31.

Combs 3 SE: Recording gage moved 2.5 miles southeast on March 26.

Maumee: Recording gage moved 175 feet west on April 1.

Parthenon: Recording gage moved 45 feet northwest on October 14.

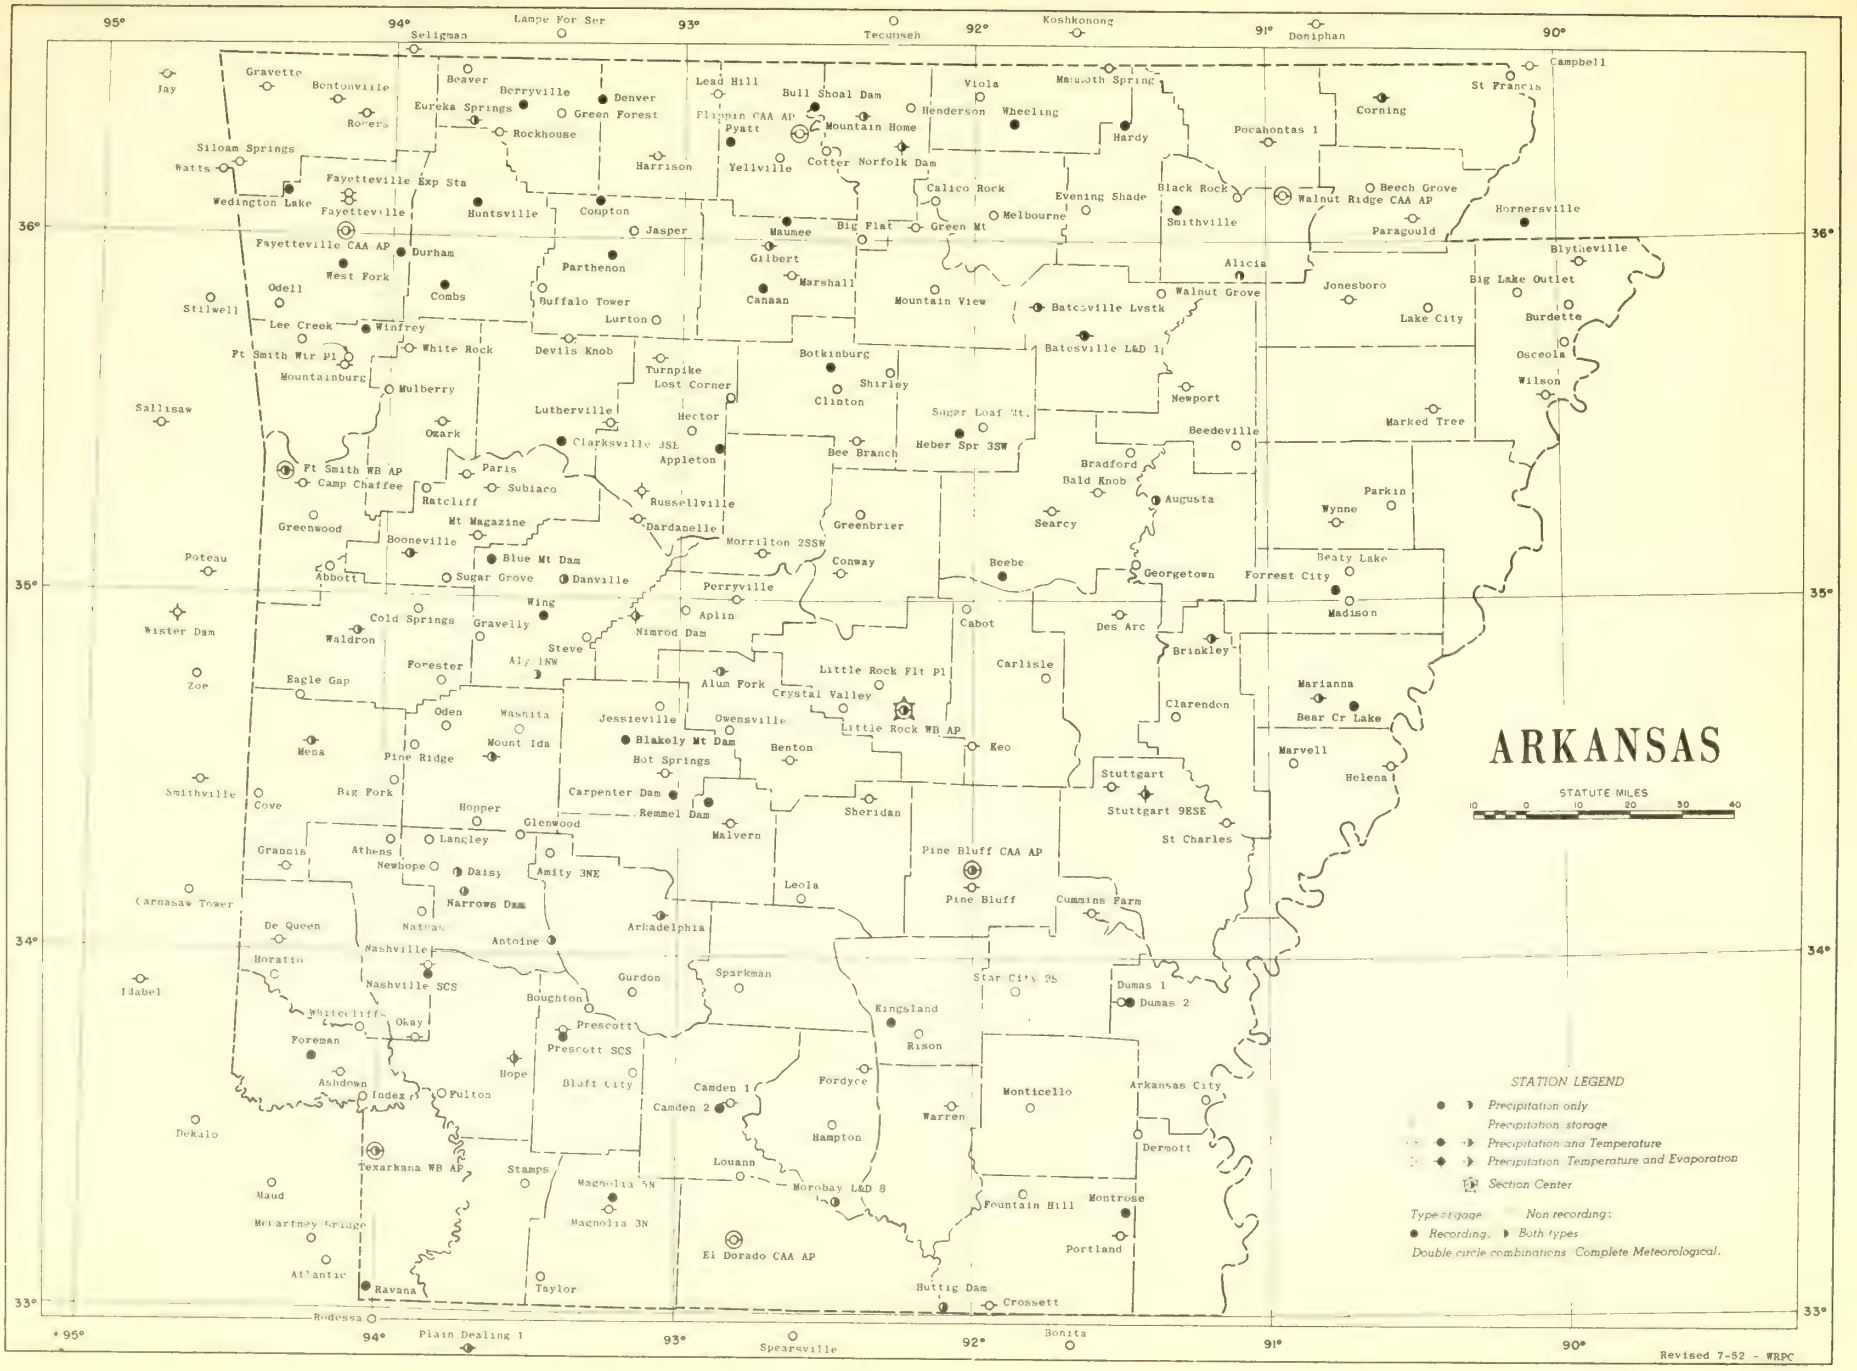
## REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.



Data for recorder stations, denoted by "C", are processed for special purpcses and published later in Hourly Precipitation Data.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Amount is wholly or partially estimated.
- M Less than a complete month of record available; if average value is entered, less than 10 days of record are missing; see monthly Climatological Data for detailed daily record.
- R Data from recording gage.
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

WBPC, KANSAS CITY, MO., -- 4-21-55 -- 1265

Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

## ARKANSAS

JANUARY 1953
Volume LVIII No. 1

KANSAS CITY: 1953

## ARKANSAS - JANUARY 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather of January 1953 over Arkansas was favorable for all outdoor activities. Good progress was made with the preparation of seed beds and the usual winter chores.

The monthly mean temperature for the State was 45.2°, which is 4.0° above the normal. Monthly mean temperatures at individual stations ranged from 37.2° at Green Mountain to 51.3° at Monticello. The highest temperature recorded during the month was 77° at Hope on the 7th and Crossett on the 15th. The lowest temperature recorded was 7° at Bentonville and Gravette on the 16th. Temperatures fell to freezing, or lower, on an average of 16 days during the month.

The monthly average precipitation, for the State, was 3.66 inches, which is 0.78 below the normal, making this the driest January since 1948. Monthly totals at the various stations over the State ranged from 1.01 at Siloam Springs to 7.97 inches at Crystal Valley. The heaviest daily precipitation amount reported was 3.75 inches at Clinton on the 23rd. There was an average of 6 days during the month with 0.01 inch, or more, of precipitation. The average monthly snowfall was 0.3 inch. The greatest monthly snowfall was 3.0 inches at Waldron, while numerous stations had no snow during the month.

The principal agricultural activity during the month was plowing and the preparation of seed beds for spring planting. This work generally progressed rapidly under almost ideal weather conditions.

The pulling of bolls and picking remnant cotton continued during most of the month. Good progress was made in pruning fruit trees. Other farm work included fencing, cutting wood, clearing ground, hauling fertilizer, building ponds, building dikes on rice land and other winter chores.

As the month opened, soil moisture was again becoming low in some areas, and water shortages were reported from many localities. This situation was generally alleviated somewhat during the last two weeks.

Winter grains and cover crops made slow growth during the first half of the month but made good progress during the latter half. Pastures and meadows generally continued fair to good the first two weeks and made a considerable gain during the last two weeks. Livestock generally faired well during the month.

### STORMS

At 8:15 p.m. of the 7th, a tornado, traveling from west-southwest to east-northeast skipped frequently over a path about 4 miles in length in the Macedonia area, in Lee Township of Cleveland County. Two persons were injured. Several houses were damaged, two extensively. Two barns and several outbuildings were destroyed. Trees and debris lay crosswise of the path and in all other directions. Very light and small hail was reported. Total monetary loss was estimated at $2,950 with no crop damage reported.

### FLOODS

General rains with storm totals averaging near two inches fell on the watershed of the Ouachita River on January 22-23, 1953, causing sharp rises on the stream. The River reached a crest of 17.5 feet at Arkadelphia at 7:00 a.m. of the 24th and 26.0 feet at Camden at 4:00 p.m. of the 26th. No damage resulted from this flooding.--JFR

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

See reference notes following Station Index.

## ARKANSAS

FEBRUARY 1953
Volume LVIII No. 2

KANSAS CITY: 1953

## ARKANSAS - FEBRUARY 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Dry and relatively warm weather prevailed over Arkansas during February 1953. In general, the month's weather was favorable for agriculture and all outdoor activity.

The monthly average precipitation for the State was 3.08 inches, which is 0.51 inch below normal, making this the driest February since 1947. Monthly totals ranged from 0.92 inch at Siloam Springs to 8.21 inches at Portland. The greatest daily amount reported was 3.40 inches at Cummins Farm on the 11th. The only measurable snowfall reported was 0.4 inch at Siloam Springs on the 24th and 0.1 inch at Fayetteville on the 20th and again on the 24th. Several stations reported flurries too light to measure. There was an average of 7 days during the month with 0.01 inch or more of precipitation.

The monthly mean temperature for the State was 45.8°, which is 2.1° above the normal. Monthly mean temperatures at the various stations ranged from 40.6° at Mount Magazine to 49.9° at Monticello. The highest temperature recorded was 79° at Arkadelphia and at Mount Ida on the 27th. The lowest temperature recorded was 9° at Mount Magazine on the 21st. There was an average of 12 days on which the temperature fell to freezing or lower.

The most important farm activity during the month was plowing and the preparation of the soil for spring planting. Except for brief intervals, the month's weather was nearly ideal for such work. Good to excellent progress was reported from all sections. Considerable rice land was cleared.

Spring gardening began in the southeast portion of the State during the first week, spread over the southern portion during the second week, into the entire State during the remaining weeks and was in full swing by the close. Some potatoes were planted during the latter half of the month. A considerable amount of spring oats and lespedeza were planted.

Cover crops made excellent progress, and pastures and meadows greened. Pastures afforded some grazing during the latter half of the month. As a result, livestock showed some improvement.

Under the influence of warm, sunny weather early in the month, buds began to swell. There was considerable apprehension for fruit, but cooler weather, beginning during the second week, held fruit bud development in check.

The month's weather was very favorable for the usual late winter and early spring chores, such as cutting stalks, building fences, butchering, hauling fertilizer, etc. There was some pruning and spraying of fruit trees, especially early in the month.

### STORMS

At 8:45 p.m. of the 11th, lightning ignited three oil storage tanks near El Dorado. The tanks and 3,000 barrels of crude oil were destroyed. No estimate of monetary loss is available. At 9:00 a.m. of the 20th, lightning struck another storage tank near El Dorado. The resulting fire destroyed the tank, accessories and stored oil. Monetary loss was estimated at $175,000.

A definite funnel-shaped cloud, moving from southwest to northeast dipped to ground briefly in the southeast part of the town of Hazen at 10:15 a.m. of the 20th. Principal damage was to roofs and small buildings. Some trees were uprooted. Total monetary loss was estimated at $1,000.

### FLOODS

No flooding occurred on the streams in Arkansas during February 1953.--JFR

## REFERENCE NOTES

The four digit-identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

## ARKANSAS

MARCH 1953
Volume LVIII No. 3

KANSAS CITY: 1953

## ARKANSAS - MARCH 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during March 1953 was warm and wet.

This was the wettest March in Arkansas since 1945 and the sixth wettest recorded since statewide records were begun in 1891. The monthly average precipitation for the State was 7.37 inches, which is 2.61 inches above normal. Monthly totals at individual stations ranged from 3.63 inches at Boughton to 11.65 inches at Sugar Grove. The greatest daily amount recorded was 3.65 inches at Bradford and Sugar Grove on the 18th. The greatest snowfall reported was a trace at several stations. Hail was reported on the 3rd, 12th, 14th, 21st, 22nd and 31st.

The monthly mean temperature for the State was 56.2°, which is 3.8° above normal, making this the warmest March in Arkansas since 1946. Monthly mean temperatures at individual stations ranged from 51.2° at Mountain Home to 61.4° at Crossett. The highest temperature reported was 90° at Crossett on the 18th and the lowest 20° at Devils Knob on the 4th. There was an average of three days during the month on which temperatures fell to freezing or lower.

Wet ground, from frequent rains during the month, seriously hampered the preparation of ground for the planting of spring crops. Advantage was taken, however, of every opportunity to get into the fields. As a result, fair to good progress was made in most areas. A considerable amount of fertilizer was spread from airplanes in areas where fields were too wet for other methods.

The planting of potatoes and gardens continued throughout most of the month. Gardens made good to excellent progress and by the close of the month were promising but wet.

The warm, moist weather was favorable for all forms of vegetation. Winter grains and cover crops grew nicely and pastures improved. By the close of the month, fall oats were beginning to head. Fruit bud development was held up by low nighttime temperatures during the first half of the month, but peaches and plums were blooming by mid-month. Fruit apparently escaped frost damage during the month.

Strawberry plants were being set out during the first week. Mulching was in progress during the second week. By the end of the third week, strawberries were advanced beyond the average for the season and by the close of the month were blooming. The plants showed good crowns, but stands were spotted with best prospects in Searcy County and poorest in White County.

### STORMS

At 12:50 p.m. of March 3rd, a hailstorm, with some stones reaching 3/4 inch in diameter, struck Melbourne, Arkansas. No damage was reported.

A hailstorm struck Little Rock at 6:30 p.m. of the 12th, causing $6,000 damage to airplanes at the Municipal Airport and $2,000 damage to a commercial greenhouse.

At 12:30 a.m. of the 14th, two tornadoes struck in west-central Arkansas. One first struck Chismville in Logan County and skipped northeastward over a path to a point five miles northeast of the Clarksville Airport in Johnson County. No deaths or injuries were reported. Total property damage was estimated at $37,500. The other tornado struck near Newnata in Stone County and moved northeastward to Myron in Izard County. Principal damage was in the Belleview, La Crosse, Franklin and Myron area of Izard County. Total property damage was estimated at $61,000. No crop damage was reported.

A hailstorm occurred in Van Buren County between 12:30 a.m. and 2:30 a.m. of the 14th, causing some damage to roofs but no damage to crops.

At 1:30 a.m. of the 14th, a tornado struck near Delaware in Yell County and moved northeastward through the Bunker Hill and Mill Creek communities to Dover in Pope County. The Bunker Hill-Mill Creek area was the hardest hit; seven persons were injured, but only two seriously. Total property damage was estimated at $145,500. No crop damage was reported.

At 3:30 p.m. of the 14th, a hailstorm struck Harrisburg, causing extensive damage to roofs and neon signs. No estimate of monetary loss is available.

During the afternoon of the 14th, a wind and hail storm struck to the south of Wynne, damaging the screen of a drive-in theater and causing some hail damage to automobiles. No estimate of monetary loss is available.

At 5:30 p.m. of the 14th, a wind and hail storm struck the Lepanto-Rivervale area of Poinsett County, blowing a tenant house from its foundation. Damage was estimated at $1,000. No crop damage occurred.

At 10:00 p.m. of the 17th, a windstorm at DeWitt damaged powerlines, television antennas and outhouses. No estimate of monetary loss is available.

At 10:45 p.m. of the 17th, a windstorm struck the Noble Lake area of Jefferson County, injuring one person and damaging four houses and several outbuildings. Damage was estimated at $6,000.

A very light hailstorm struck Little Rock at 8:52 p.m. of the 21st. No damage was reported.

During the early afternoon of the 22nd, widespread wind, hail, rain and electrical storms buffeted Eastern Arkansas, including Pulaski, White, Independence, Prairie, Woodruff, Jackson, Cross, Poinsett, Craighead and Cleveland Counties, with heaviest damage in the Beebe and Searcy areas of White County. The only injury reported was in Independence County and was due to lightning. Total monetary loss was estimated at $435,500. No crop damage was reported.

A windstorm struck the Cherry Hill community of Perry County at 10:00 a.m. of the 31st, demolishing the school building and injuring five persons, two of them seriously. Damage was estimated at $5,000.

A wind and hail storm struck Pulaski and Lonoke Counties at 12:55 p.m. of the 21st, with principal damage in the vicinity of the town of Lonoke where hailstones weighing from 1/2 to 3/4 pounds and up to 12 inches in circumference were reported. Property damage was estimated at $64,000 and crop damage at $3,000.

### FLOODS

General moderate to heavy showers on the 13th and 14th with storm totals averaging near 2.00 inches over the Arkansas, Upper White and Little Red River Basins, and near 1.00 inch on the Black and Middle White River Basins brought moderate rises on the Arkansas and White Rivers and sharp rises on the Black and Little Red Rivers. These rains were followed by general heavy showers on the afternoon and evening of the 17th and morning of the 18th, giving storm totals averaging between 2.50 to 3.00 inches over most of the district. This precipitation caused sharp rises on all streams in the district, with minor flooding on the White from Augusta downstream, the Ouachita, Saline Petit Jean, Little Red and Lower Black Rivers. No flood damage was reported.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

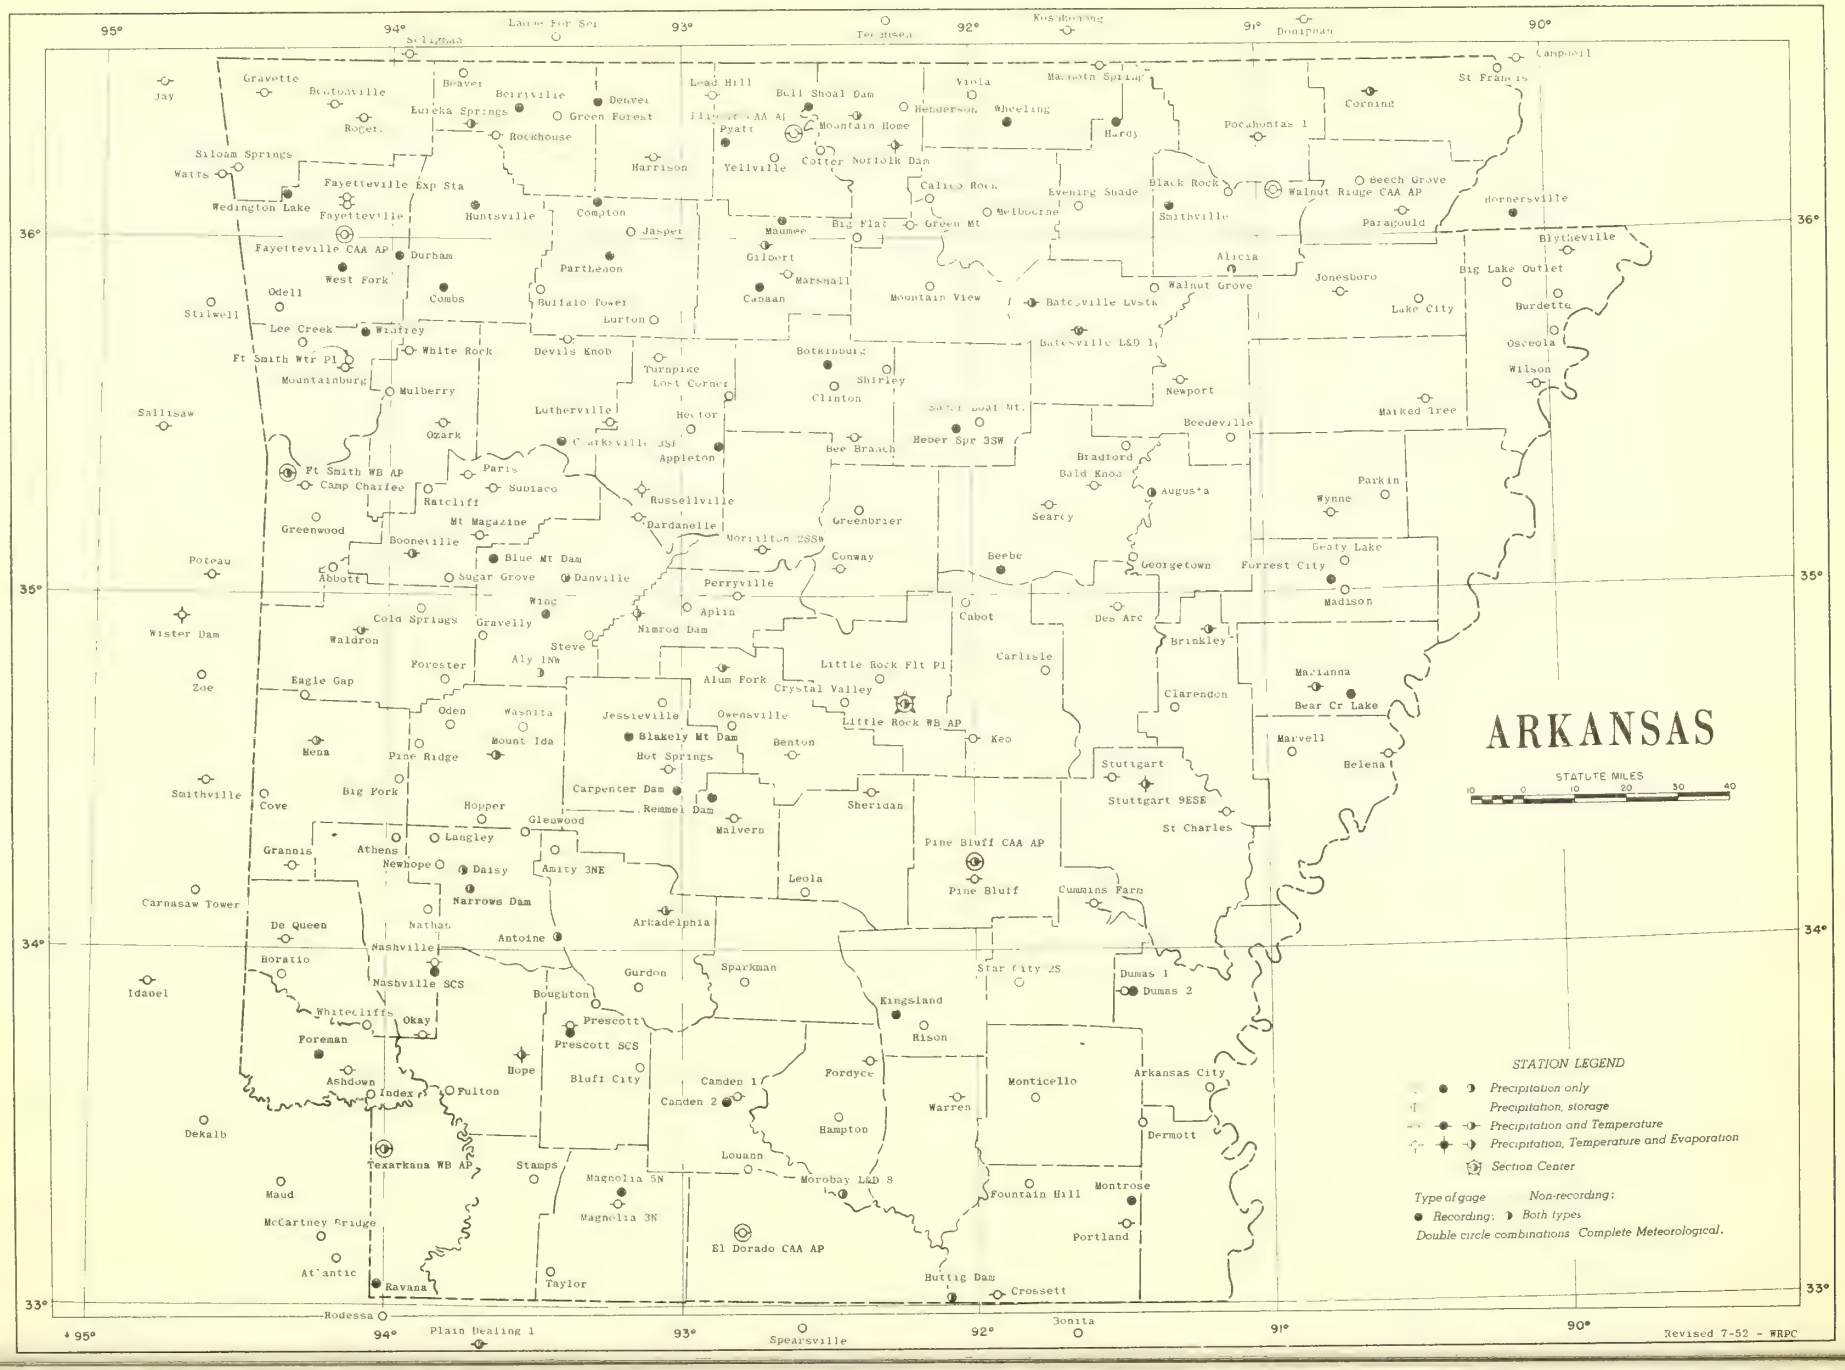
Station names appearing in tables, but for which data are not listed, are either missing or received too late to included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the Standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

APRIL 1953
Volume LVIII No. 4

KANSAS CITY: 1953

## ARKANSAS - APRIL 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Rainy and relatively cool weather prevailing during the month of April 1953 seriously delayed field work and the planting of spring crops.

The average monthly precipitation for the State was 7.10 inches, which is 2.16 inches above the normal, making this the wettest April in Arkansas since 1945. Monthly totals over the State ranged from 3.59 inches at Corning to 12.51 inches at Athens. The greatest daily amount reported was 4.01 inches on the 29th at Taylor. The month's average snowfall was too light to measure. The greatest monthly snowfall was 0.1 inch at Fayetteville, which occurred during the evening of the 17th. There was an average of nine days with measurable precipitation during the month.

The monthly mean temperature for the State was 57.7°, which is 3.9° below the normal. Station monthly mean temperatures ranged from 52.3° at Mount Magazine to 62.9° at Crossett. The highest temperature recorded was 90° at Crossett on the 9th and at Lead Hill on the 22nd. The lowest temperature recorded was 23° at Lead Hill on the 19th. Freezing temperatures occurred on an average of only three days during the month.

Field work was seriously hampered by wet ground during much of the month. Full advantage was generally taken of every opportunity to get into the fields. Whenever conditions would permit, tractors were operated day and night. Despite every effort, the preparation of seedbeds and spring planting fell considerably behind schedule except in a few more favored localities.

A small amount of cotton had been planted by the end of the first week, but by mid month, only from 10% to 25% of the cotton land in the State was ready for planting. By the close of the month, only 40% to 50% of the cotton acreage had been planted. Heaviest plantings were in Ashley County with 70% and Saint Francis County with 65%. Germination was slow due to wet soil and cool weather. As a result, those stands that were up were only fair. Some replanting of first seeded acreage was anticipated. At the close of the month, some early cotton in Ashley County was reported to be ready for chopping.

As the month opened, some early corn had been planted and a little had come up. While planting progressed as rapidly as soil conditions permitted, it was slow in most areas. At the close of the month, some early planted fields were up to fairly good stands, but in many localities germination and growth had been checked by cold, wet weather.

Wet ground seriously delayed the preparation of fields and the seeding of rice. By the close of the third week, seeding was reported to be 50% completed in Ashley County and 40% completed in Chicot County, but only a limited amount had been planted elsewhere. By the close of the month, seeding was 90% completed in Ashley County, 80% completed in Chicot County and 50% completed in Lee County, and considerable progress was reported in other areas.

By the close of the month, only a very limited acreage of soybeans had been planted.

The month's weather was favorable for the growth of small grains, hay and pastures. Small grains generally made excellent growth, especially where fertilized or top dressed. There were scattered reports of wind and storm damage in some localities. Some apprehension was felt that abundant growth might result in excessive lodging at harvest time. Scattered cuttings of alfalfa were reported during the last half of the month. Pastures continued to make good progress except for some slowing due to cool weather. As a result, cattle generally made good gains during the month.

Strawberry harvest generally began in the southwestern quarter of the State during the second week and became general over the southern half and had begun in the central and west-central counties during the third week. The crop in the northwestern counties suffered severe frost damage during the month with lighter damage reported in other areas.

Peaches suffered some frost damage with heavy damage reported in the northwestern counties. Apples and grapes also suffered severe frost damage in the northwestern portion.

### STORMS

During a severe electrical storm on the 5th, lightning set fires which destroyed a commercial building and a Lutheran Church in Fort Smith.

At 8:00 p.m. of the 9th, a hail and wind storm struck Piggott. Stones ranging from the size of marbles to one inch in diameter covered the ground to an average depth of 1.0 inch with drifts to 3.0 feet reported. There was considerable damage to roofs, windows, fruit and gardens.

During the afternoon of the 11th, a hailstorm struck Bradley County. Crop damage was extensive, but most severe in the Gravel Ridge, Prospect and Blue Springs areas.

At 11:00 p.m. of the 14th, a hailstorm struck Mena, causing considerable damage to gardens, flowers and shrubs.

At 1:45 a.m. of the 15th, lightning set fires that destroyed two houses in El Dorado. Damage was estimated at $6,000. Some hail accompanied the storm, but damage from this source was negligible.

At 12:20 a.m. of the 18th, a severe wind and hail storm struck Sebastian County, causing extensive damage over a path extending eastward from Fort Smith to Lavaca. The ball park at Fort Smith was almost totally destroyed, together with damage to roofs, windows, automobiles, etc. There was some damage to roofs in rural areas. Crops and fruit trees suffered considerable damage. Hail stones the size of golf balls with some as large as baseballs were reported. Property damage was estimated at $525,000 and crop damage at $75,000.

Between 3:30 a.m. and 6:00 a.m. of the 18th, wind and hail storms caused two deaths, 41 injuries, $1,403,000 property damage and $90,000 damage to crops in Crittenden, Cross, Independence, Jackson, Poinsett and White Counties. Principal damage was due to wind, but heavy hail was reported from several localities in the storm area. The crops most affected were strawberries, winter grains, truck and gardens. The two fatal injuries were in Poinsett County.

At 7:00 p.m. of the 23rd, a tornado damaged several buildings and destroyed a new brick structure at Alma in Crawford County. The funnel cloud was observed by many persons. Damage was estimated at $10,000. No deaths or injuries were reported.

At 4:00 a.m. of the 24th, a tornado struck the College Hill section of Texarkana, damaging houses, automobiles and trees. The path of the storm extended from southwest to northeast and was about 100 yards wide and one mile in length.

At 4:15 a.m. of the 24th, a hail and wind storm covered an area within a radius of 5-6 miles of the Hope Experiment Station of the University of Arkansas. Hail stones ranging from 1/2" to 1 1/2" were reported. Property damage was estimated at $800. Crop damage, principally to tomatoes, sweet potatoes, peaches and oats was estimated at $1,200.

### FLOODS

Heavy rains on the 5th and early morning of the 6th, giving storm totals averaging near 2.25 inches over the Ouachita watershed caused a sharp rise on the stream at Arkadelphia on the 6th, which reached Camden on the 10th. Moderate rains occurred intermittently until heavy rains fell on the night of the 23rd-24th, which averaged near 3.00 inches over the Ouachita Basin. These rains caused sharp rises at Arkadelphia, followed by a slower rise at Camden. A third period of heavy rains during the night of the 28th and the morning of the 29th averaging near 2.50 inches over the Ouachita Basin caused a sharp rise at Arkadelphia and continued high water at Camden. Flooding on the White River during the opening days of April 1953 was due to continued high water from the previous month. No flood damage was reported. There was, however, some delay in the utilization of lands adjacent to the streams.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

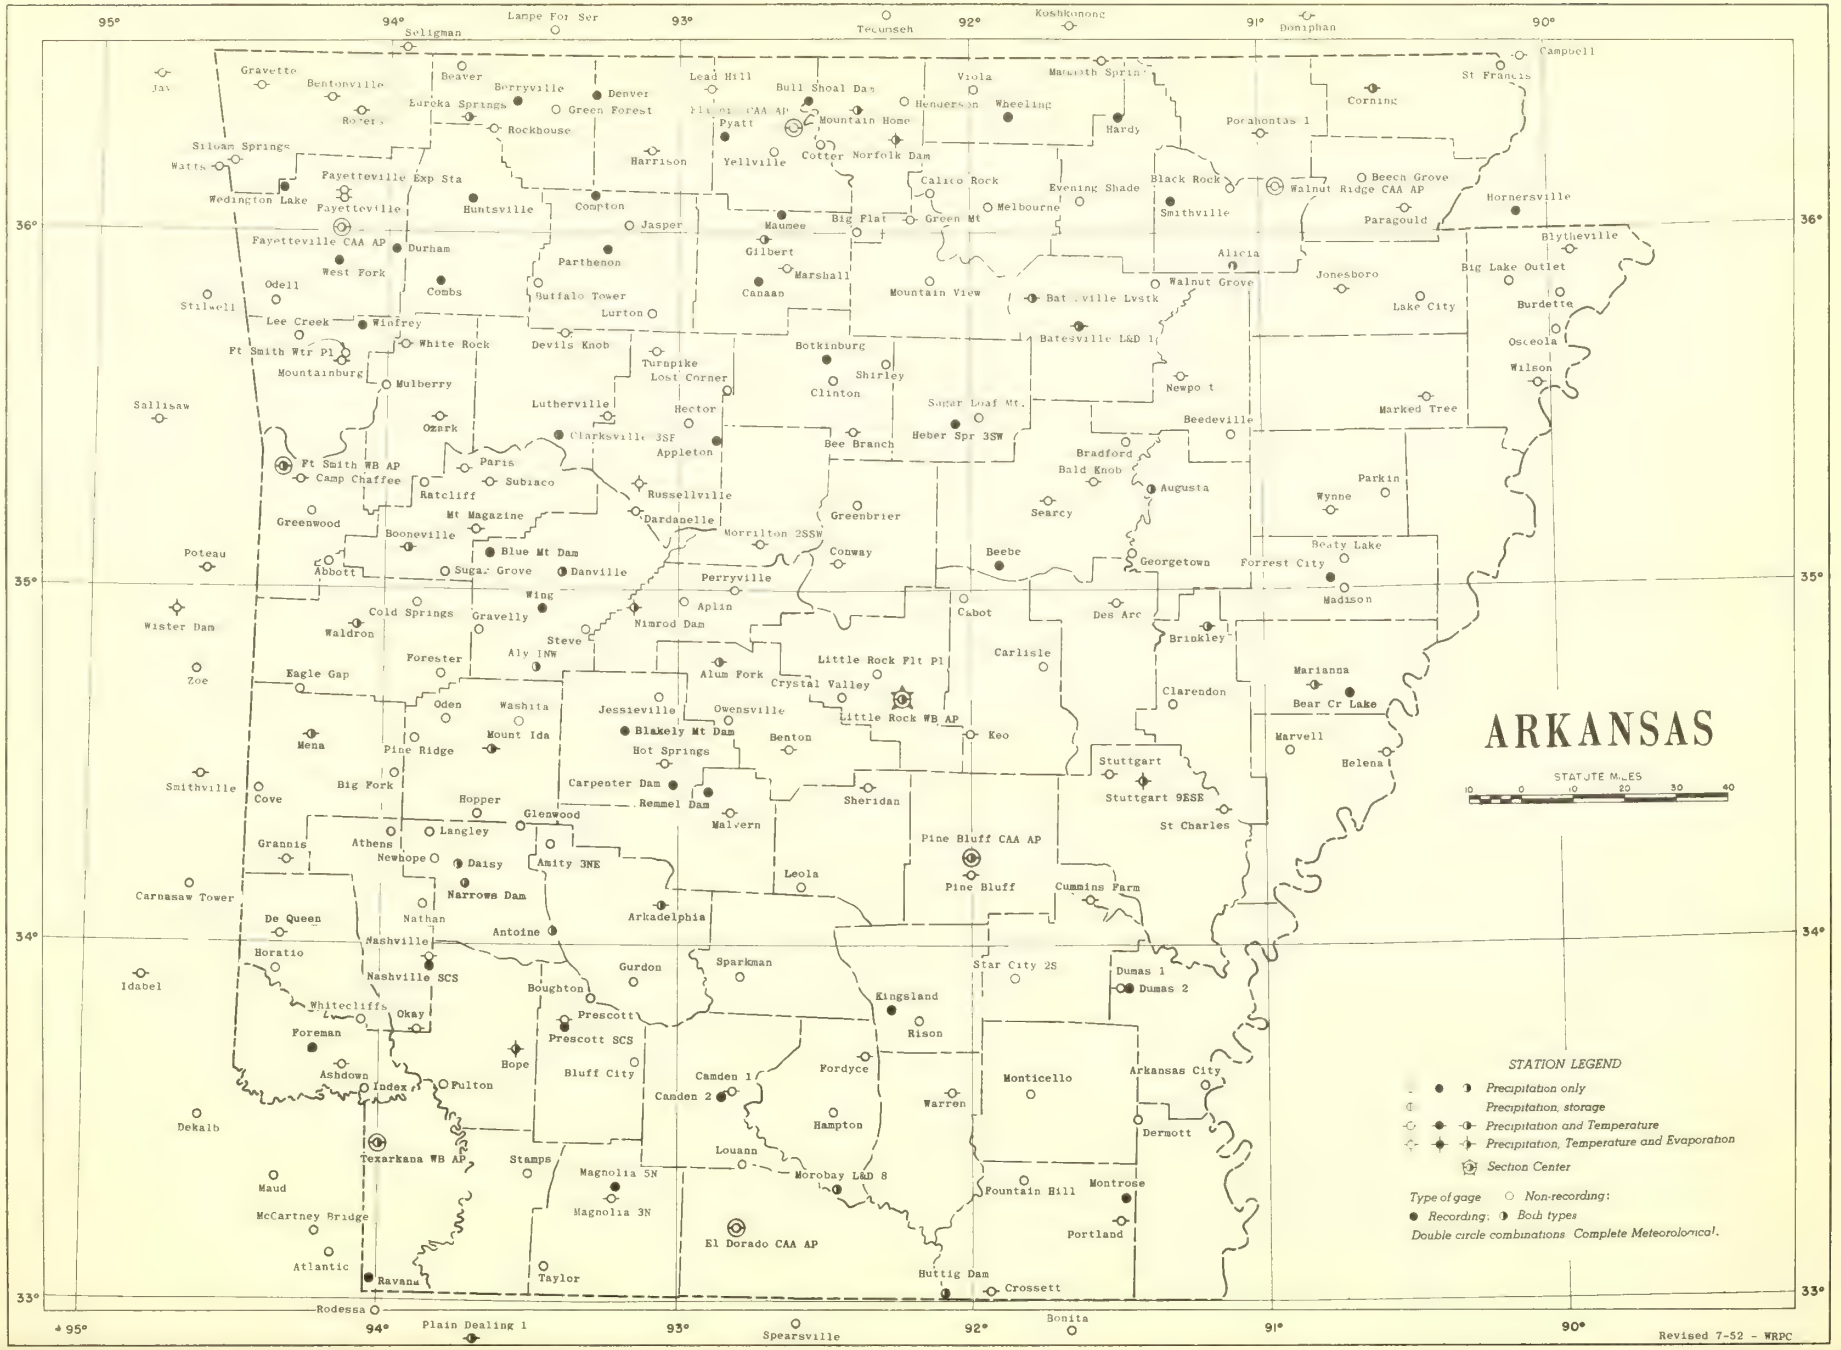
Station names appearing in tables, but for which data are not listed, are either missing or received too late to included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equi.alent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

MAY 1953
Volume LVIII No. 5

KANSAS CITY: 1953

## ARKANSAS - MAY 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Below-normal temperatures and frequent general rains prevailed over the State until the 19th, giving way to bright sunshine and above normal temperatures after that date.

Rainfall was frequent and widespread during the first 19 days of the month, with only a very few isolated showers reported after that date. The average monthly precipitation for the State was 7.59 inches, which is 2.48 inches above the normal. Monthly totals at individual stations ranged from 2.20 inches at Henderson 2 W to 16.75 inches at Warren. The greatest daily precipitation was 5.70 inches at Bald Knob on the 11th. Scattered light hail was reported over Northeastern Arkansas on the 10th. Locally heavy hail occurred in the Blue Springs area of Bradley County on the 12th. Light hail was reported at Rison on the 16th. There was an average of 11 days with 0.01 inch or more of precipitation during the month.

The monthly mean temperature for the State was 70.1°, which is 1.0° above the normal. Monthly mean temperatures over the State ranged from 64.4° at Turnpike to 73.3° at Dumas No. 1. The highest temperature reported was 99° at Gravette on the 28th, Arkadelphia on the 29th and Wilson on the 31st. The lowest temperature reported was 38° at Mammoth Spring on the 6th, 8th and 9th. There was an average of eight days on which temperatures rose to 90° or higher.

Unfavorable weather prevailing until the 19th of May, seriously interfered with the preparation of seed beds and the planting of cotton, rice, corn, soybeans and other crops. Cool, wet soils caused slow and uneven germination in most areas.

At the beginning of the month, only 40 to 50 percent of the State's cotton acreage had been planted. By the end of the third week, the work was about 20 days behind schedule. Much of the cotton that was planted came up to uneven stands. Seedling diseases also caused some damage. Much early planted cotton became so grassy as to pose a serious problem. Many farmers chose to replant rather than to go to the expense of hoeing. The advent of dry weather after the 19th brought a sharp upswing in planting, cultivating and chopping. Much April planted cotton was replanted. By the close of the month, plantings made after the rains were up to good stands.

The problem facing the rice growers proved to be even more serious than that facing the cotton farmers. By the 19th, only about 10-15 percent of the State's rice acreage had been planted. A few fields were "water seeded" or "mudded in", but no important acreage was handled in this manner. There was no general improvement in the situation until the closing week when rapid progress was reported. Approximately 80 percent of the crop had been seeded by the close of the month.

While corn fared some better than cotton, the weather of the first 19 days of the month was unfavorable for the crop. Warm, sunny weather during the remainder of the month proved to be very favorable. As a result, the crop made rapid progress. Most early corn had been cultivated and some side dressed with nitrogen by the close of the month.

Very few soybeans were planted until late in the month, and planting was only about 50 percent completed by the close. At that time, early soybeans were up and making a good growth.

Small grains made generally good progress during the month and ripened rapidly the last two weeks. A few fields of oats had been combined by the close of the month. Pastures and meadows continued in good to excellent condition. A very fine cutting of hay was harvested in nearly all sections during the last week.

The strawberry harvest was at its peak in the principal producing areas during the first two weeks. Berries were generally of excellent quality, but there was some deterioration due to excessive moisture. This was especially noticeable during the 3rd week.

Truck crops, gardens and fruit generally fared well during the month. A few early peaches were marketed near the close of the month.

### STORMS

During the afternoon of May 3rd, lightning struck a house at Earle. The resulting fire destroyed the house and furnishings.

Several storms occurred on May 10th. At 12:10 p.m., several persons to the southwest of Russellville witnessed two small tornado funnels travelling from southwest to northeast. These merged into one funnel just before reaching the city. Several buildings near the fairgrounds were damaged and a portable roller rink destroyed. At 12:30 p.m., a windstorm damaged a house and unroofed several garages and outbuildings. Between 2:30 and 3:00 p.m. a wind and hailstorm struck Weiner in Poinsett County, injuring 5 persons and damaging a house. The hail was very light and caused no damage. Lightning destroyed one house and damaged another in Carlisle at 3:00 p.m. A windstorm destroyed a barn and a truck at Rector during the afternoon; there was also some hail, but damage from this source was negligible. Between 4:10 and 4:20 p.m., a hail and windstorm struck the Zion-Franklin area of northeastern Izard County. One barn was destroyed and several buildings damaged. There was considerable damage to timber. Stones averaging 1/2 inch in diameter, with some as large as 1 inch, covered 35 percent of the ground. Two farm houses near Dumas were destroyed by lightning at 6:30 p.m. A wind and hailstorm struck Newport during the afternoon. The screen of a drive-in theater was destroyed along with some minor property damage. No hail damage was reported.

A number of storms occurred on May 11th. At 2:00 a.m., lightning destroyed a house near Foreman. At 1:00 p.m., lightning damaged an apartment building in the Rose City area of North Little Rock. Between 2:00 and 2:05 p.m., wind tore the hall ceiling out of the High School Building at Siloam Springs. At 4:00 p.m., lightning destroyed a house at Slaty Crossing in Yell County. A windstorm at Monticello at 7:30 p.m. damaged one house.

May 12th was also stormy. At 10:00 a.m., lightning severely damaged a house in the West Fork Community of Washington County. At 12:00 noon, lightning extensively damaged a house at Mulberry. Between 2:15 and 2:30 p.m., a windstorm damaged one house, one barn and several shade trees at the Shiloh Community of Grant County. Between 2:40 and 3:00 p.m., a windstorm struck Rison, damaging a half block area to the north of the railroad. At 3:00 p.m., a windstorm destroyed a private garage at Macedonia. Between 4:00 and 5:00 p.m., a hail and windstorm struck the Blue Springs, Hope Well and Centerpoint Communities in northwestern Bradley County. The hailstones averaging 1 1/2 inches in diameter with some up to 7 inches in circumference covered the ground to a depth of 2.00 inches.

During an electrical storm at Little Rock at 6:20 a.m. of the 16th, lightning severly damaged a business building in the downtown area. At 5:30 p.m. of the 16th, hail damaged tomatoes in the Rison area.

### FLOODS

General moderate to heavy rains began over the State during the night of the 10th and continued through the 18th. The heaviest fall occurred between the 10th and 13th, giving storm totals that averaged near 5 inches over the Ouachita watershed and over 5 inches on the Lower Black and middle White River Basins.

These rains caused sharp rises on the Ouachita at Arkadelphia and Camden, with extensive flooding of the Ouachita and tributaries in the Camden area. This was due in part to the relatively high stages which prevailed even before the occurrence of the heavy rains, caused by continued high water from the previous month.

The White River was above flood stage at Clarendon for the entire month, and at St. Charles from the fifth through the 31st. The flooding during the early part of the month was caused by rains in late April. The White River at Georgetown and Des Arc was above flood stage from the 15th to the 25th. The Little Red at Judsonia showed a sharp rise on the 14th, cresting at 30.8 ft. on that date.

Flood damage was heaviest along the Ouachita and its tributaries below Remmel Dam. Total flood damage was estimated at $59,000. Fifteen thousand acres of farm land were inundated with damage to cotton and corn estimated at $12,000, damage to livestock at $9,000, and building damage at $4,000. Damage to other than rural property totaled $11,000. Operations were suspended at the Smackover Oil Field for several days. Total loss of income and wages in the basin was estimated at $21,000.

Flooding on the White River at Georgetown and below caused little damage except for the loss of the use of lowlands during the flood period.--JFR.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

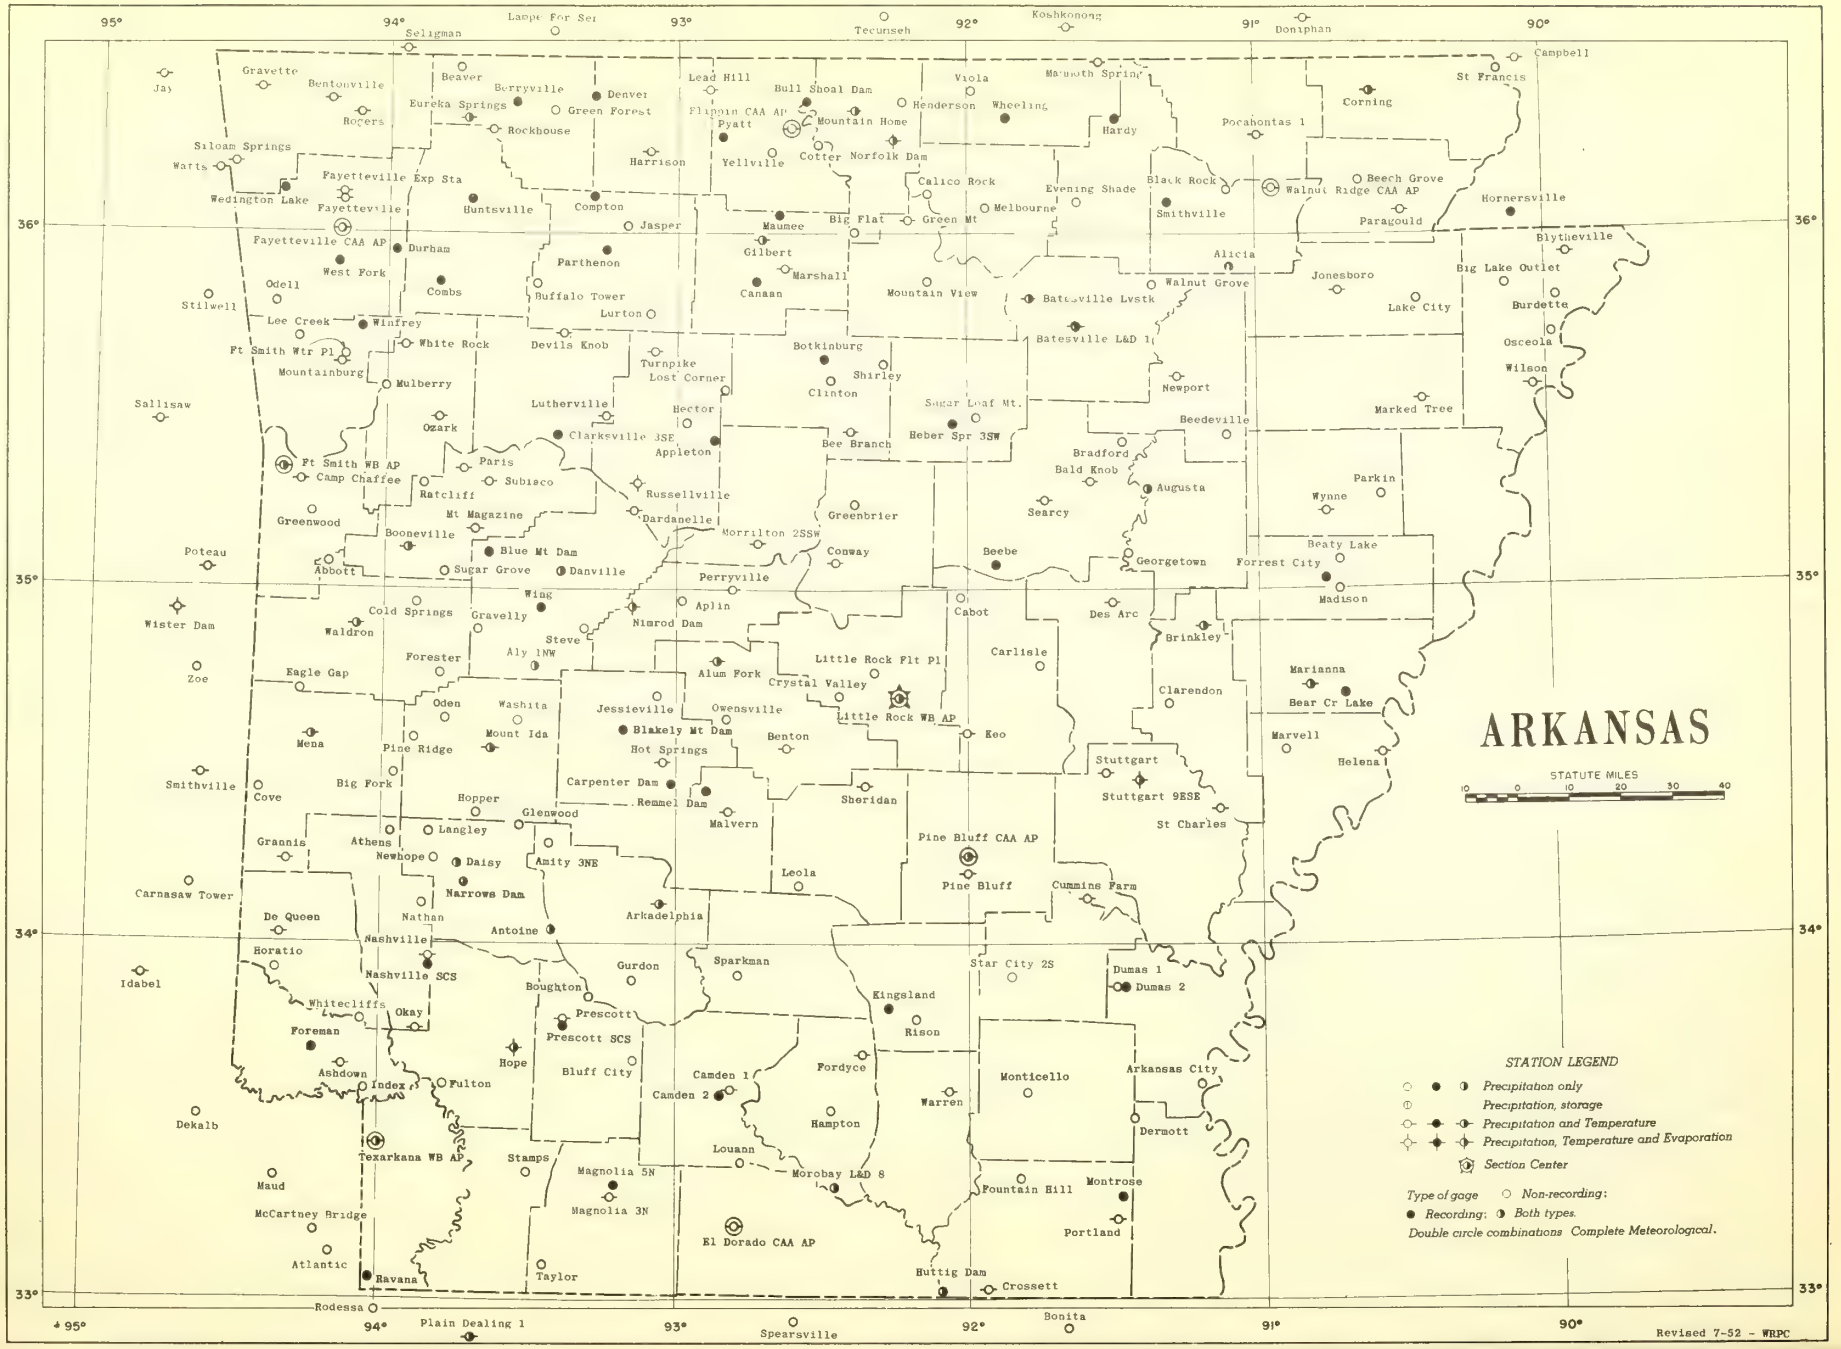
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

JUNE 1953
Volume LVIII No. 6

KANSAS CITY: 1953

## ARKANSAS - JUNE 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the hottest and second driest June in Arkansas since statewide records were begun in 1891. Most crops suffered considerable drought damage during the month.

The monthly mean temperature for the State was 83.4°, which is 6.3° above the normal This exceeded the previous record of 82.3°, established in June of 1914 and again in 1925, and was 1.3° above the 82.1° mean temperature of June 1952. Monthly mean temperatures at individual stations ranged from 78.1° at Mount Magazine to 86.9° at Subiaco. The highest temperature recorded was 108° at Subiaco on the 19th and at Hot Springs on the 21st. The lowest temperature recorded was 51° at Mammoth Spring on the 3rd. There was an average of 28 days on which temperatures rose to 90° or higher.

The average monthly precipitation for the State was 0.63 inch, which is 3.48 inches below normal, making this the second driest June on record in Arkansas. The driest June was in 1952 when the monthly average precipitation for the State was 0.49 inch. Monthly totals at stations over the State ranged from no precipitation during the month at seven stations to 4.76 inches at Stuttgart. There was an average of two days with 0.01 inch or more of precipitation.

The hot, dry weather that began during the last two weeks of the preceding May continued throughout June. While extremely welcome after the excessively wet and cool weather of the preceding spring, the drought began to affect some crops adversely during the latter half of June.

There was a heavy seeding of late cotton during the first two weeks of the month. By mid-month most of the crop had been planted. Chopping progressed rapidly and a very clean early crop was in evidence by the end of the second week. Some late plantings, especially on heavy soil, were badly in need of moisture for proper germination and growth. By the close of the third week most early cotton had begun to bloom.

Early corn made good to excellent progress during the first half of the month but was seriously in need of rain during the latter half. By mid-month most of the early acreage had been fertilized and "laid by". The adverse effects of the drought on early plantings became apparent during the closing week. Like cotton, late plantings of corn were in need of rain for proper germination and growth, but most stands were holding up fairly well.

The seeding of rice was completed early in the month. By the close of the first week early sown fields were up to good stands and growing nicely and some had been flooded. During the last half of the month heavy watering was necessary to offset rapid evaporation. By the close of the month some apprehension of a water shortage was felt.

The growth of early soybeans was slowed somewhat by the hot dry weather, but generally the crop made good progress. Dry soil interfered with the germination and growth of late plantings. Stands were poor on many late planted fields.

The harvest of fall sown grains was completed by the end of the month. Some very good yields were obtained, although they did not quite come up to earlier expectations.

The first half of the month was nearly ideal for putting up hay. Excellent quality cuttings of oats, alfalfa, clover and meadow grasses were put up. The growth of lespedeza was slowed by lack of moisture. The weather during the last half of the month was unfavorable for the growth of hay crops, but some good cuttings were obtained.

Pastures suffered severely from the hot dry weather, except for a brief period of rapid growth during the opening days of the month. A rapid deterioration set in during the second week, especially in the uplands. By the close of the month the situation had become critical. Cattle began the month in excellent condition and continued to make gains during the first two weeks. Most herds held up well during the remainder of the month but the feed situation had become critical by the close.

The month's weather was generally unfavorable for fruit and truck crops. Many crops deteriorated during the month, and most yields were short. Some irrigated fields of snapbeans and cucumbers did well, while most non-irrigated fields of these crops were practically failures.

## STORMS

At 2:30 p.m. of the 7th a hailstorm occurred in the Huffman area of Mississippi County. Some stones as large as baseballs were reported. No damage resulted.

During the late afternoon and early evening of June 11th, a series of severe wind and thunderstorms progressed southwestward from Piggott in eastern Clay County over a wide, irregular path to Hot Springs in Garland County and Malvern in Hot Spring County. The storms were first reported at Piggott at 3:30 p.m., reached Searcy at 5:30 p.m., Little Rock at 6:00 p.m., and Malvern at 7:00 p.m. The duration of the storms at points along the path was approximately one-half hour. The principal wind damage was at Piggott, where losses totaled $80,000. Damage in most areas was confined to roofs, windows, signs, and shade trees. Hail occurred in eastern Clay County where crop damage amounting to $25,000 was reported. Four persons were injured in the storms. The total property damage over the State was estimated at $200,000.

During the late afternoon of the 11th winds accompanying a local thunderstorm destroyed a hangar at the Ozark Municipal Airport. Planes stored in the hangar were undamaged. Total loss was estimated at $1,000.

During the afternoon of the 11th some very small hail fell during a thunderstorm at Dyees in Mississippi County. No damage resulted.

During the late afternoon of the 23rd hailstones ranging up to one inch in diameter fell during a thunderstorm at McDougal in Clay County. Very little damage was reported.

## FLOODS

Flooding during the month of June was confined to the White River at Clarendon and below and was due to continued high water from the previous month. The river was above flood stage at Clarendon from the beginning of the month until the 5th and at Saint Charles until the 6th. Flood damage was negligible.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 8-18-53 -- 1005

## CORRECTIONS

| | |
|---|---|
| January 1952: | Blytheville, Table 2, degree days should be 619. |
| | Dardanelle, Table 2, degree days should be 598. |
| | Rogers, Table 2, precipitation departure should be -0.58. |
| | Wilson, Table 2, mean maximum should be 56.2, mean 45.6, departure +5.2, and degree days 594. |
| | Wilson, Table 5, maximum on 4th should be 47, on 9th 52, and mean maximum 56.2. |
| October 1952: | Louann, Table 3, precipitation on the 6th should be .00 and total for month .00. |
| January 1953: | Pine Bluff CAA AP, Table 2, total precipitation should be 4.23 and days .01 or more should be 9. |
| | Pine Bluff CAA AP, Table 3, precipitation on 23rd should be .20 and total 4.23. |
| February 1953: | Green Mountain, Table 2, days with minimum temperature 32° or lower should be missing. |

## ARKANSAS

JULY 1953
Volume LVIII No. 7

KANSAS CITY: 1953

## ARKANSAS - JULY 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

After the drought of the preceding June, there was a return to favorable growing weather during July with adequate rains and slightly below normal temperatures.

The monthly mean temperature for the State was 80.2°, which is 0.3° below normal. The highest monthly mean temperature was 83.2° at Conway and the lowest, 74.0° at Mount Magazine. The highest temperature during the month was 109° at the Batesville Livestock Experiment Station on the 6th. The lowest temperature recorded during the month was 49° at Gilbert on the 11th. There was an average of 21 days on which the temperature rose to 90° or higher.

The average monthly precipitation was 4.65 inches, which is 0.91 inch above the normal. Monthly totals at individual stations ranged from 0.49 inch at Mammoth Spring to 14.84 inches at Mena. The greatest daily amount recorded was 5.73 inches at Mena on the 21st. There was an average of 9 days during the month on which 0.01 inch or more of precipitation was recorded.

The month's weather was favorable for cotton. At the beginning most early cotton was growing and putting on squares and blooms in all sections, but the prospects for late planted cotton was not promising, and much had failed to come up. Rains during the month were beneficial to the crop. Some early cotton was fruiting as the month opened and fruiting continued throughout the month. By the close, some late cotton was in need of a period of warm dry weather with some danger of the crop becoming too rank.

Early rice fared very well during the month with much of the crop showing an improvement. It was necessary to use excessive quantities of irrigation water during the first two weeks, but rainfall during the latter half of the month alleviated this situation. By the close of the month heads were coming into boot in some fields. A turn to favorable conditions also promoted the growth of grass and weeds. Much 2,4-D was used in weed control.

Much early corn, except on bottom lands, was beyond recovery as the month opened, and the prospects for late corn were not promising. Late corn, however, responded very well to the adequate rains of the last three weeks of the month. By the close, the prospects for intermediate and late corn were good except in the dry areas. Early corn made only a slight recovery.

Soy beans made steady progress after the first week. By the close of the month a number of early-planted fields were blooming.

Hay crops generally showed a marked improvement during the month but some stands of lespedeza were killed by the drought of the previous June. Pastures showed a material improvement, especially during the last two weeks, and by the close of the month were providing adequate grazing in most areas.

Steady progress was made in the preparation of ground for the seeding of winter grains, with a record acreage of oats expected in many counties.

The showers came too late to help some of the earlier vegetable crops but the majority of the truck, melon, and fruit crops showed improvement. Good rains increased the size of peaches materially.

### STORMS

At 12:45 p.m. of the 3rd, lightning struck the Drew Theater Building in Monticello. The resulting fire destroyed the building, causing damage estimated at $100,000.

During the afternoon of the 6th a windstorm destroyed one house, unroofed two houses, damaged six other houses, and damaged or destroyed several buildings in the McGinty Community of Faulkner County. Damage was estimated at $9,000.

Between 3:45 p.m. and 4:15 p.m. of the 6th a wind, lightning and hail storm struck Cash, damaging several houses, destroying a barn, and damaging several out-buildings. Damage was estimated at $4,000. Light hail did $3,000 damage to cotton, rice, and soybeans.

At 4:00 p.m. of the 6th one home and two other buildings at Mount Ida were damaged by lightning. A few trees were blown down. No estimate of monetary loss was available.

At 5:14 p.m. of the 6th a house at Paragould was struck by lightning. The resulting fire destroyed the house causing a monetary loss estimated at $4,000.

Between 8:00 p.m. and 9:00 p.m. of the 6th a wind, lightning and rain storm struck Russellville. Damage was confined to the city limits and was principally in the business district. Several buildings were unroofed, including the telephone exchange. Damage was estimated at $110,000.

During the morning of the 8th a farm house sever miles south of Lonoke was struck by lightning. The resulting fire destroyed the house. Damage was estimated at $5,000.

WEATHER SUMMARY CONTINUED

**A windstorm struck Hector between 5:15 and 6:00 p.m. of the 8th doing an estimated $500 damage to buildings. Some corn was blown down but no estimate of the damage to the crop is available.**

**At 2:30 p.m. of the 20th, several persons in the Jefferson community of Desha County watched a tornado funnel cloud dip to earth and demolish an old log barn. No other damage was reported.**

**At 4:00 p.m. of the 21st a wind storm damaged a house and a barn in the St. Paul community of Howard County. Damage was estimated at $1,200.**

**C. H. Turpin was killed by lightning while working in a field at Nettleton on the 25th.**

**There were no floods in Arkansas during the month.--J.F.R.**

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

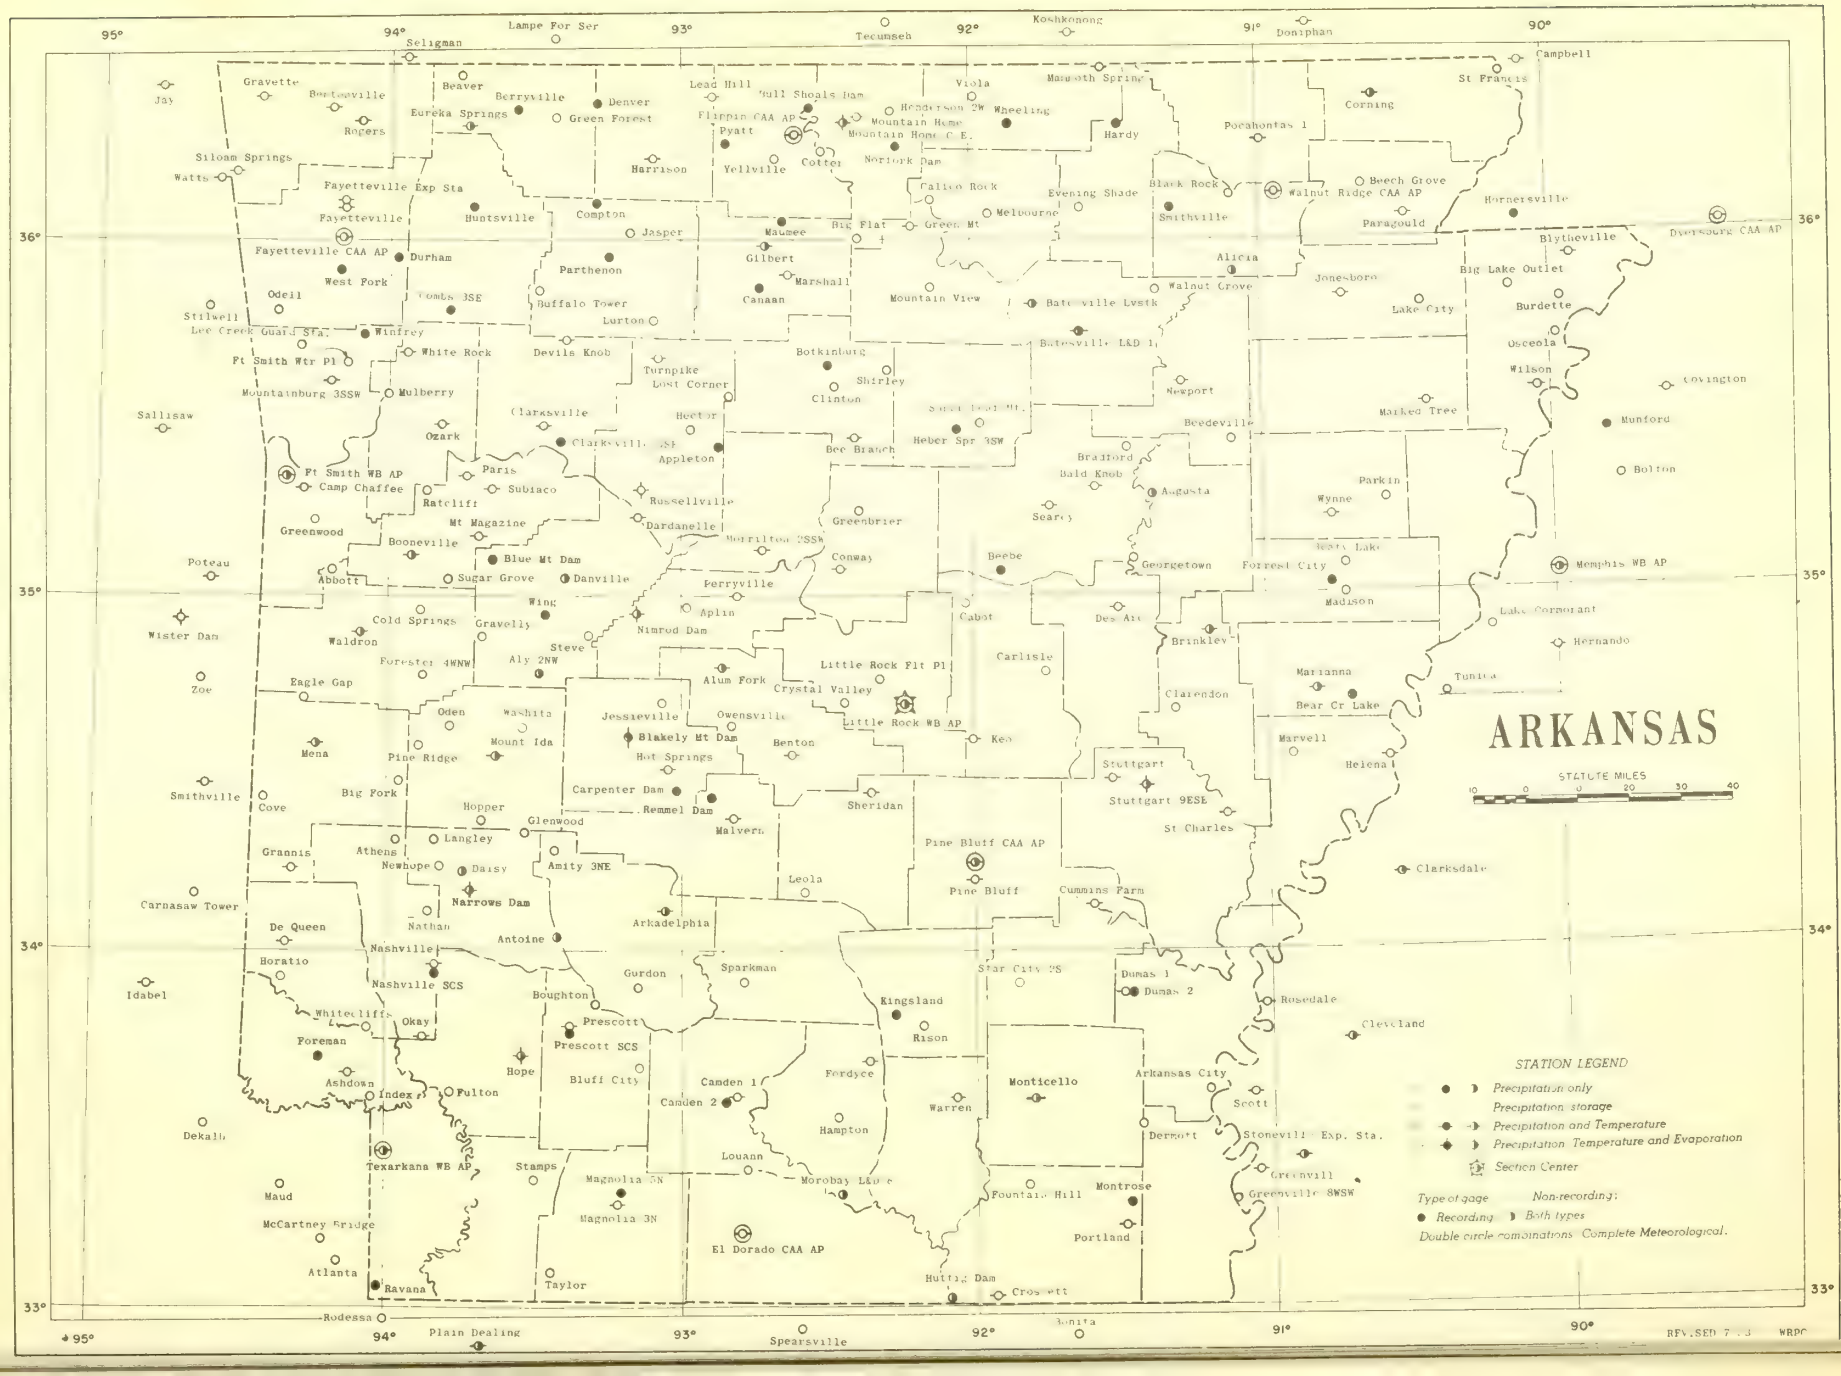
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

WBT, KANSAS CITY, MO., -- [illegible] -- [illegible]

**Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".**

## ARKANSAS

AUGUST 1953
Volume LVIII No. 8

KANSAS CITY: 1953

## ARKANSAS - AUGUST 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during the month of August 1953 was generally unfavorable for agriculture.

The average monthly precipitation for the State was 1.59 inches, which is 2.00 inches below the normal. The greatest monthly total reported was 4.05 inches at Danville. No rain fell during the month at Star City and Wilson, and only sprinkles too light to measure were recorded at Georgetown and Portland. The greatest daily amount reported was 2.82 inches at Ozark on the 17th. There was an average of four days with 0.01 inch or more of precipitation during the month.

The monthly mean temperature for the State was 79.6° which is 0.4° below the normal. At the individual stations, monthly mean temperatures ranged from 74.8° at the Fayetteville Airport to 82.9° at Pine Bluff. The highest temperature reported was 106° at Conway on the 4th and the lowest, 45° at Gilbert on the 20th and 21st. There was an average of 24 days on which the temperature rose to 90° or higher. Mount Magazine had 5 such days and Conway had 31.

Cotton generally fared well during the month. The crop made excellent growth the first two weeks except in the drier counties of the northeast and east-central portions where some daytime wilting and shedding of bolls was reported. The early crop began to mature near the middle of the month. Some cotton opened and limited picking began during the third week. By the close of the month the early crop was opening rapidly. The condition of late cotton was more varied with more drought damage reported. A relatively large amount of cotton was irrigated during the month but this acreage was quite small as compared with the total.

While early corn was too badly damaged to make more than a partial recovery, intermediate and late corn made good progress during the first two weeks. Late corn, however, began to suffer from lack of moisture near mid-month. Much of the crop was made before the close of the month with some fair to good yields in prospect.

Rice made good progress during the month. The early crop began to head in all sections during the first week. A few fields were combined during the closing week. The water situation became critical in some sections during the latter half of the month, since much water was required to offset evaporation.

Soybeans made fair to good progress during the month but were badly in need of water in the closing weeks. There was some blasting of blooms during the first two weeks. The crop was generally fruiting during the last half of the month. There were reports of pods not setting in the drier areas.

Grain sorghums generally made good progress during the month except for some slowing of growth due to dry weather. Fruits, truck crops, and gardens were generally in need of rain during the latter half of the month.

Pastures were generally in good condition and furnished adequate grazing during the opening week, but deteriorated rapidly during the remainder of the month. As a result, cattle required considerable supplemental feeding, and in most areas lost weight progressively. By the end of the month the stock water situation had become critical in many localities. Marketing of cattle increased during the month.

### STORMS

During the early afternoon of August 4th, windstorms hit Jonesboro and Bono causing an estimated $38,000 damage. During the same afternoon lightning killed 17 head of milk goats at the Compton Community in Newton County and set a fire which destroyed a barn and 1,500 bales of hay 12 miles south of Melbourne in Izard County.

At 7:30 p.m. of the 5th, a windstorm destroyed two small planes and damaged a third at the Russellville Airport. Damage was estimated at $2,500.

At 4:00 a.m. of the 6th, lightning killed five cows when it struck a tree nine miles south of Hope.

A wind and hail storm which struck Clarksville at 4:30 p.m. of the 12th caused damages estimated at $20,000. Small hail covered the ground to a depth of one-half inch.

During the early morning of the 13th, lightning killed seven head of cattle and set a fire which damaged a house at Mammoth Spring.

On the 16th lightning set a fire which destroyed a barn and hay at Eureka Springs.

At 12 noon of the 16th a wind and hail storm struck Fayetteville, damaging several houses and barns. Monetary loss was estimated at $1,150. Hailstones averaged one-half inch in diameter and caused an estimated damage of $50.00 to corn.

At 12:15 p.m. of the 16th a wind and hail storm struck Ozark. Hailstones ranged from 1/4 to 1/2 inch in diameter. Total damage was estimated at $250.

One person was injured by lightning at Texarkana at 3:12 p.m. of the 18th.

## FLOODS

There were no floods on Arkansas streams during August 1953.--JFR
